### **Scope and Field of Application**

112 This supplement introduces the structure and codes used to transfer cardiac ultrasound measurements and assessments focused on Pediatric, Fetal, and Adult congenital echo procedures. The goal of the supplement is to establish a set of base encodings for fetal and pediatric echo studies to be used in the transfer of measurements and calculations from ultrasound machines for subsequent review.

The templates of this supplement do not replace the use of Template 5200 for routine Adult Echocardiography.

116 This supplement does not address physician reports.

**Changes to NEMA Standards Publication PS 3.16-2009**

**Digital Imaging and Communications in Medicine (DICOM)**

**Part 16: Content Mapping Resource**

**Add normative reference to Section 2 ‘Normative References’:**

148 **Quantitation of the Left Ventricle**

Recommendations for Quantitation of the Left Ventricle by Two-Dimensional Cardiac Ultrasound, Journal of the American Society of Cardiac Ultrasound, Vol 2, No 5 358-367, Oct 1989.

152 **Add the following new Templates to Annex A ‘DCMR Templates (Normative)’:**

**TID 5220 Pediatric, Fetal and Congenital Cardiac Ultrasound Reports**

This template forms the top of a content tree that allows an ultrasound application to describe the results of a Cardiac Ultrasound imaging procedure. It is instantiated at the root node.

168 **TID 5222 Pediatric, Fetal and Congenital Cardiac Ultrasound Section**

This is a generic section heading Template for any of the anatomical headings. Measurements within a section heading appear as groups (by image mode or acquisition protocol).

| Parameter Name   | Parameter Usage                                       |
|------------------|-------------------------------------------------------|
| \$SectionSubject | The subject modifier of the section heading container |
| \$MeasType       | The concept name of the measurement                   |

176 **TID 5223 Pediatric, Fetal and Congenital Cardiac Ultrasound Measurement**

180 This Template provides for the post-coordination of a measurement with a variety of concept modifiers and acquisition context observations. When invoked from TID 5222, the measurement concept is implicitly post-coordinated with the concept modifiers of the Measurement Group (TID 5222 Rows 5 and 6), and with the Finding Site of the report section (TID 5222 Row 2). The finding site may be further specified within this Template by the Target Site and Target Site Modifiers (CID 12280 and CID 12281).

184 The implicit finding site inherited from TID 5222 can be made explicit by using the same finding site concept in the Target Site (the measurement concept modifier), rather than a term from CID 12280. This explicit post-coordination allows the use of one of the modifiers of CID 12281 to that finding site, as the Target Site Modifier requires an explicit Target Site in the measurement structure (TID 300 Rows 5 and 7). In fact, any child concept of the finding site in the SNOMED hierarchy may be used as the measurement Target Site.

188 The finding or target site may be identified by a concept from the SNOMED "clinical finding" or "morphological anomaly" hierarchies (e.g., D4-31220 "Atrial Septal Defect", or M-36700 "Effusion"), rather than the "anatomical structure" hierarchy. In this case, the meaning is inferred as "the anatomic location of the clinical finding or morphological anomaly, within the constraints of other implicit or explicit post-coordinated finding site concepts."  
192

Note: Thus when TID 5221 Row 14 invokes TID 5222 with the section finding site concept (T-39000, SRT, "Pericardium"), and TID 5223 Row 1 applies the target site (M-36700, SRT, "Effusion"), the effective finding site is "pericardial effusion".

196

| Parameter Name | Parameter Usage                                             |

|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Row 1 | For an index type of measurement, the concept name of this row 1 will still be the original measurement concept name; it is row 2 that gives the indication that row 1 is actually an index type of measurement. When this happens, the measurement value of row 1 should be a value after being indexed and the measurement unit of row 1 should be an index type of unit.<br><br>For example, to insert a "Stroke Volume Index" measurement to this SR object, the concept name of row 1 will be "Stroke Volume", its numerical value will be the calculation result of "Stroke Volume /BSA" and its units are "ml/cm^2". |
| Row 2 | When this row is available, the row 1 is an index calculation of the object.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**Changes to NEMA Standards Publication PS 3.17-2009**

**Digital Imaging and Communications in Medicine (DICOM)**

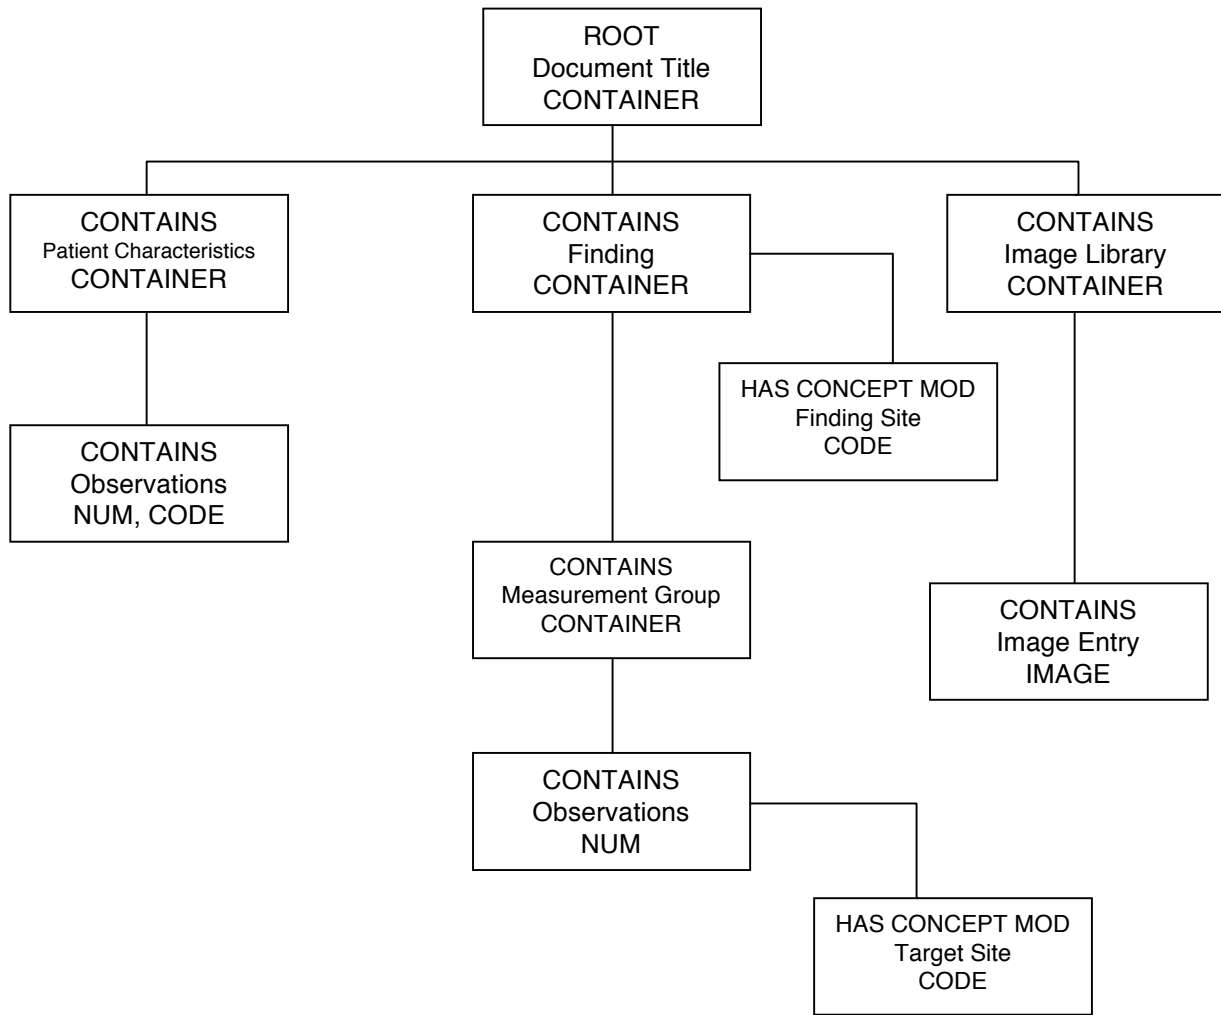

**Part 17: Explanatory Information**

**Add Informative Annex**

568 **ANNEX X Pediatric, Fetal and Congenital Cardiac Ultrasound Reports (INFORMATIVE)**

**X.1 CONTENT STRUCTURE**

The Figure X.1-1 is an outline of the Pediatric, Fetal and Congenital Cardiac Ultrasound Reports.

572 **Figure X.1-1 Top Level Structure of Content**

**X.2 PEDIATRIC, FETAL AND CONGENITAL CARDIAC ULTRASOUND PATTERNS**

The common Pediatric, Fetal and Congenital Cardiac Ultrasound measurement pattern is a group of measurements obtained in the context of a protocol. Figure X.2-1 shows the pattern.

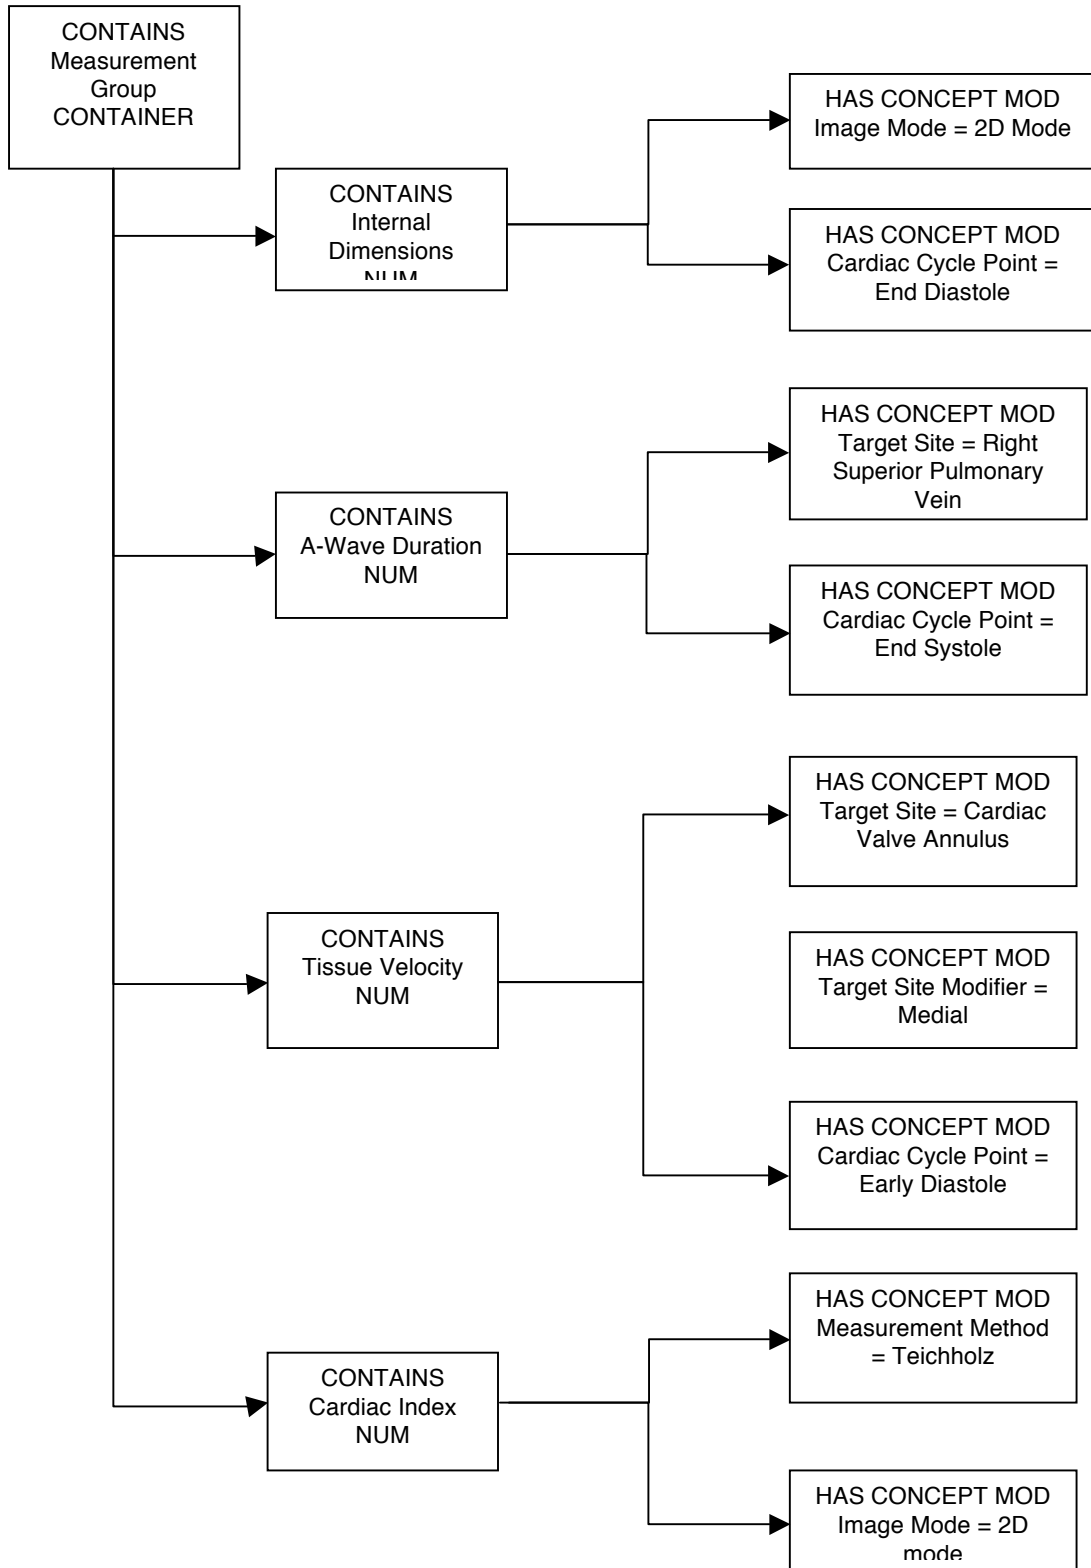

Figure X.2-1 Pediatric, Fetal and Congenital Cardiac Ultrasound Measurement Group Example

**X.3 MEASUREMENT TERMINOLOGY COMPOSITION**

580 Because of the wide variety of congenital issues in fetal and pediatric cardiology, DICOM identifies these findings primarily with post-coordination. The concept name of the base content item typically specifies a property, which then requires an anatomic site concept modifier.

| <b>Concept Name of Modifier</b>           | <b>Value Set</b>                                 |
|-------------------------------------------|--------------------------------------------------|
| (G-C036, SRT, "Measurement Method")       | CID 12227 Cardiac Ultrasound Measurement Methods |
| (G-C0E3, SRT, "Finding Site")             | CID 12280 Cardiac Ultrasound Target Sites        |
| (G-C048, SRT, "Flow Direction")           | CID 12221 Flow Direction                         |
| (R-4089A, SRT, "Respiratory Cycle Point") | CID 12234 Respiration State                      |
| (R-4089A, SRT, "Cardiac Cycle Point")     | CID 12233 Cardiac Phase                          |
| (121401, DCM, "Derivation")               | CID 3627 Measurement Type                        |

584 Further qualification specifies the image mode and the image plane using HAS ACQ CONTEXT with the value sets shown below.

| <b>Concept Name</b>         | <b>Value Set</b>                      |
|-----------------------------|---------------------------------------|
| (G-0373, SRT, "Image Mode") | CID 12224 Ultrasound Image Modes      |
| (111031, DCM, "Image View") | CID 12226 Echocardiography Image View |
