A Picture Is Worth A Thousand Words:

Needs Assessment for Multimedia Radiology Reports in a Large Tertiary Care Medical Center

Lina Nayak, MD, Christopher F. Beaulieu, MD, PhD, Daniel L. Rubin, MD, MS, Jafi A. Lipson, MD

Rationale and Objectives: Radiology reports are the major, and often only, means of communication between radiologists and their referring clinicians. The purposes of this study are to identify referring physicians' preferences about radiology reports and to quantify their perceived value of multimedia reports (with embedded images) compared with narrative text reports.

Materials and Methods: We contacted 1800 attending physicians from a range of specialties at large tertiary care medical center via e-mail and a hospital newsletter linking to a 24-question electronic survey between July and November 2012. One hundred sixty physicians responded, yielding a response rate of 8.9%. Survey results were analyzed using Statistical Analysis Software (SAS Institute Inc, Cary, NC).

Results: Of the 160 referring physicians respondents, 142 (89%) indicated a general interest in reports with embedded images and completed the remainder of the survey questions. Of 142 respondents, 103 (73%) agreed or strongly agreed that reports with embedded images could improve the quality of interactions with radiologists; 129 respondents (91%) agreed or strongly agreed that having access to significant images enhances understanding of a text-based report; 110 respondents (77%) agreed or strongly agreed that multimedia reports would significantly improve referring physician satisfaction; and 85 respondents (60%) felt strongly or very strongly that multimedia reports would significantly improve patient care and outcomes.

Conclusions: Creating accessible, readable, and automatic multimedia reports should be a high priority to enhance the practice and satisfaction of referring physicians, improve patient care, and emphasize the critical role radiology plays in current medical care.

Key Words: Multimedia reports; radiology reporting; digital images; communication; radiology practice.

Radiology

Structured Radiology Reporting:
Are We There Yet?[1]

Curtis P. Langlotz, MD, PhD

Given the prominent role that information technology will play in the future of health care delivery, the potential benefits of structured reporting systems now seem more relevant than ever. These systems may lead to rapid cohort design. The same 25 brain magnetic resonance (MR) imaging cases were reviewed in two distinct phases by two separate groups of residents: a control group and an intervention group. The MR imaging cases contained a representative

What is a "Structured Report"?

- Human perspective (radiologist, cardiologist, pathologist, referring physician …)
  - Not a massive blob of prose (narrative)
  - Organized
  - Hierarchical
  - Sections and sub-sections
  - Bullet lists
  - Question and answer rather then single sentence
- Machine perspective
  - coded section headings
  - coded questions with answers:
    - coded answer
    - text answer
    - numeric answer (with coded units)
  - links to images, regions of interest, coordinates (spatial & temporal)

Machine Readable Reports

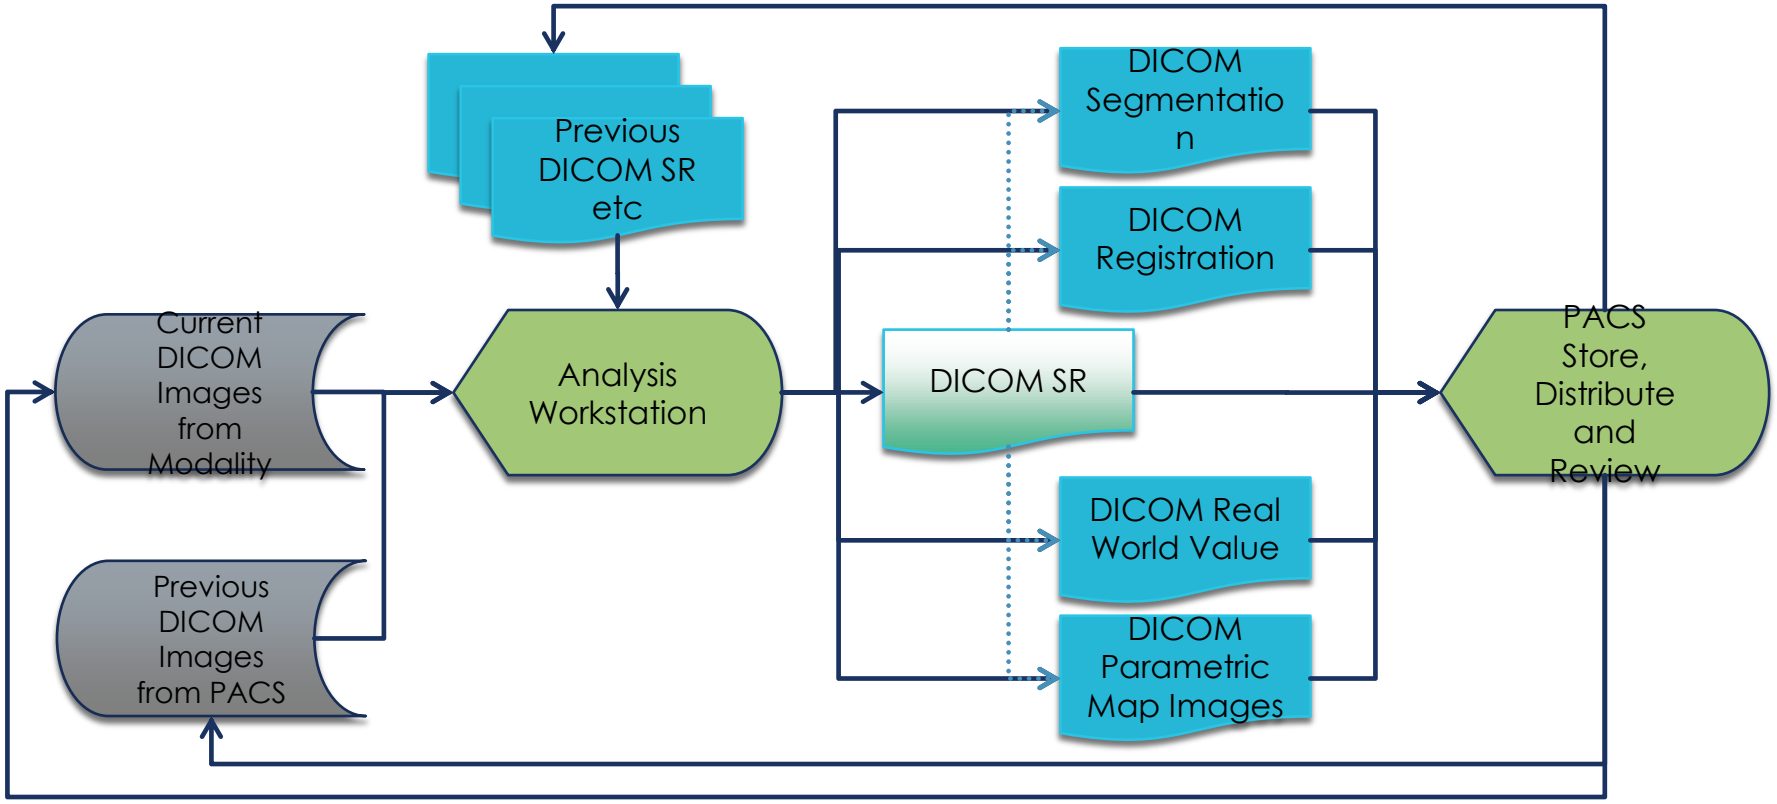
DICOM
Digital Imaging and Communications in Medicine

AI CHANGES THE GAME

DICOM Structured Reports

- A machine-readable structured report that satisfies humans too
- Added to DICOM circa 2000
- Primary use-cases circa 2018
  - Ultrasound cart output – echocardiography, obstetric measurements
  - Mammography CAD output
  - Radiation Dose from CT and projection X-Ray devices (RDSR)
  - Key Object Selection (KOS)
  - limited use for human-generated narrative reports with section structuring
- Major new use-cases in the quantitative/machine learning era
  - tumor/lesion region of interest encoding
  - quantitative measurements and categorical classification
    - created by humans or machines

DICOM Non-Image Objects



DICOM SR organizes them …

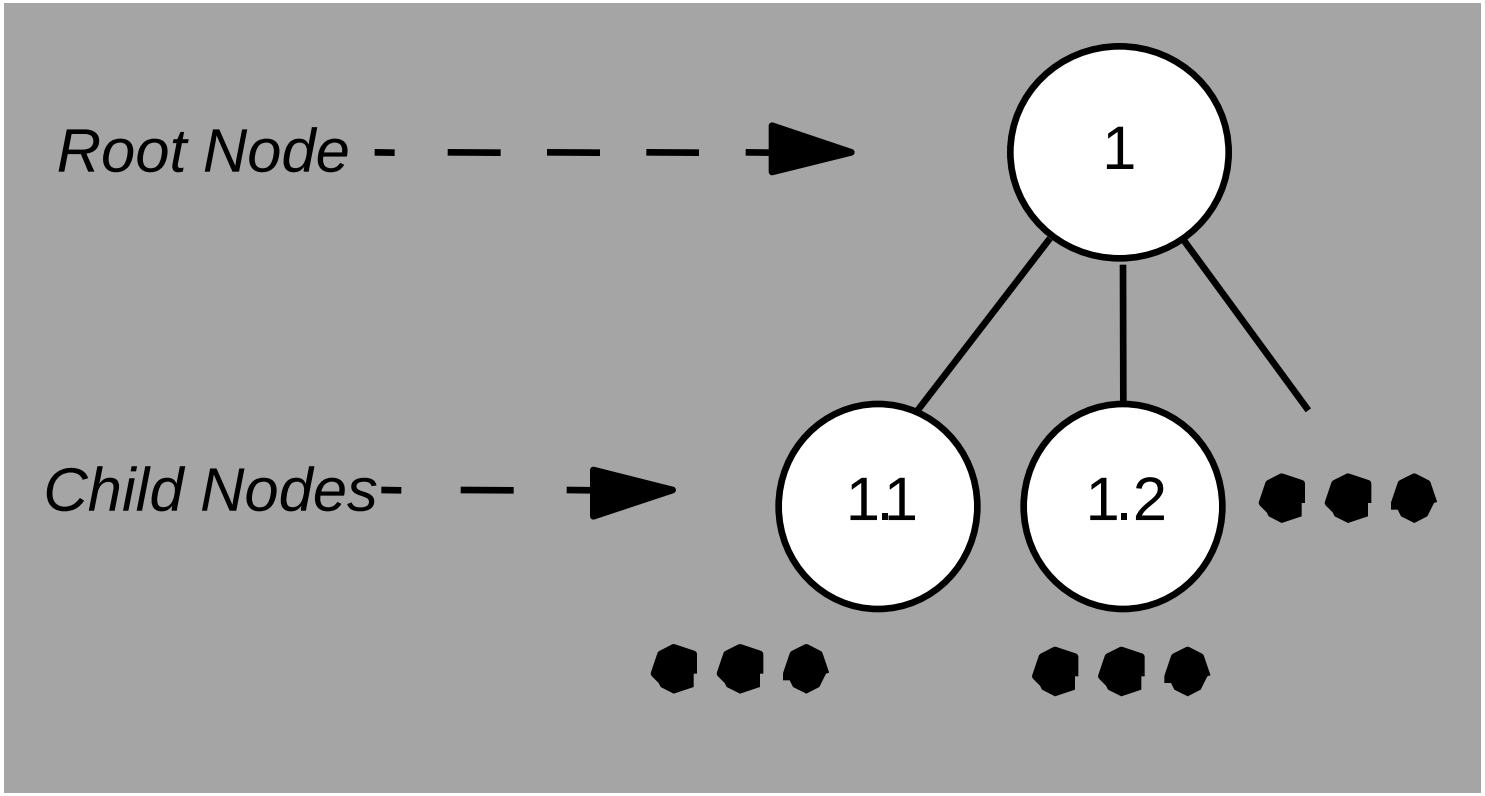
SR Content is a Tree



Each Node (Content Item)

- Is a "name-value" pair
  - e.g. "finding" = "mass"
- Concept "name" is always coded
  - e.g. (121071, DCM, "Finding")
- "Value" may be one of several "value types"
- "Value" may be coded too
  - e.g. (M-37000, SRT, "Hemorrhage")
  - e.g. 37.2 (mm2, UCUM, "square

What about Codes?

- DICOM uses external lexicons
  - SNOMED
  - LOINC
  - RADLEX
  - defines DCM codes & definitions if no other good scheme
- EHR push towards more reliable codes
  - e.g., EHR interoperability and common data elements
  - RIS, modalities and PACS implementations could do better
  - institutions need to standardize internal procedure codes

Codes for Structured Reports

- Codes needed for
  - entities, e.g., lesions, tumors, tissue types
  - location, e.g., anatomic site
  - characteristics, e.g., edges, enhancement
  - measurements, e.g., volume, sum of areas, mean
  - units, e.g., HU, mm
- Availability
  - many already - SNOMED, LOINC, RADLEX, DCM, NCI, UCUM
  - more being defined every day
  - vendors also use private codes
  - need to anticipate code evolution (configurable producer/consumer)

ROI and Segmentation Codes

Constrained by Templates

- Generic tree of content items has unbounded complexity, so need constraints
- Templates for interoperability for specific use cases
  - e.g., Mammography CAD
- Templates for entire structure
  - "root level"
- Templates for parts of structure – re-usable
  - e.g., Volumetric ROI Measurements
- Defined in PS3.16, follow pattern similar to Module tables in PS3.3
  - (coded) name of content item
  - requirement type
  - multiplicity
  - conditions
  - value set for coded values
  - coded units for numeric values

Table TID 1411. Volumetric ROI Measurements

	NL	Rel with Parent	VT	Concept Name	VM	Req Type	Condition	Value Set Constraint
1			CONTAINER	EV (125007, DCM, "Measurement Group")	1	M

8	>	CONTAINS	IMAGE	EV (121233, DCM, "Source image for segmentation")	1-n	MC	XOR Row 9 and IFF Row 7	

Key Object Selection Document

- Specialized form of DICOM Structured Report
  - SOP Class constrains to specific template
- Essentially
  - list of images and other DICOM objects ("manifest")
  - coded Document Title, e.g., "For Clinical Trial Export"
  - text description
- Used in IHE as
  - Key Image Note profile
  - manifest for XDS-I profile

Presentation States relatively useless

- DICOM Presentation States are great for capturing state of rendering to human
  - zoom/pan, window center/width, …
  - but limited text and graphic annotations
  - no semantics
  - not even linkage of graphics and text
  - can be referenced from SR to set appropriate viewing conditions for referenced images
- Unfortunately are very popular with PACS due to their simplicity
  - better than no DICOM capture of annotations at all of course
  - means product managers not motivated to add SR support
- Ideally, all PACS viewers would support displaying any kind of SR
  - not just tabulating/rendering hierarchical content as text
  - not just jumping to reference image
  - but also displaying all coordinates/SEG references overlaid on images
  - preferably with local context from the tree such as finding, measurements and units

DICOM SR Nirvana!
