

DICOM Correction Proposal

STATUS	Assigned
Date of Last Update	2024/12/19
Person Assigned	Wim Corbijn
Submitter Name	Jeroen Medema, jeroen.medema@philips.com
Submission Date	2025/11/05

Correction Number	CP-2478
Log Summary:	Clarify when what columns are relevant
Name of Standard	PS3.4
Rationale for Correction:	PS3.4, Section 8: second paragraph does not define <i>when</i> what columns are relevant / to be used, while a remark on matching column names could easily be added to make that clear.
Correction Wording:	See below, including some typographical corrections.

Modify PS3.4, Section 8 as indicated below

8 Coded Entry Usage in Service Specifications

The Macros in this Section specify the usage of the Attributes that correspond to Coded Entries as defined by Table 8.8-1 Code Sequence Macro Attributes.

Not all invocations make use of all the columns **of these macros**. **Of these macros, only the columns with names matching the names of columns of the invoking table are used in the invoking table**. For example, in some invocations, only the "Requirement Type [SCU/SCP]" is relevant; in others, only the "Matching Key Type" and "Return Key Type" columns are used.
