2

Scope and Field of Application

- 2 This Supplement defines several IODs for RT Radiation Records based on the real-world model and specifications defined for 2nd Generation RT Objects in DICOM, see PS3.3 A.86.
- 4 The SOP Classes in this document are defined to record how a treatment was performed. This comprises acquired machine parameter values, measured dose values, overrides, etc. In addition,
- 6 recording of a salvage record is covered where recording by the modality-specific RT Radiation Record IOD was not possible, see PS3.3 A.86.1.9.
- 8

Part 2 Addendum

2 **Add new SOP Classes to PS3.2 Table A.1-2 UID Values:**

UID Value	UID Name	UIDKeyword	Category
1.2.840.10008.5.1.4.1.1.481.16	RT Radiation Record Set Storage	RTRadiationRecordSetStorage	Transfer
1.2.840.10008.5.1.4.1.1.481.17	RT Radiation Salvage Record Storage	RTRadiationSalvageRecordStorage	Transfer
1.2.840.10008.5.1.4.1.1.481.18	Tomotherapeutic Radiation Record Storage	TomotherapeuticRadiationRecordStorage	Transfer
1.2.840.10008.5.1.4.1.1.481.19	C-Arm Photon Electron Radiation Record Storage	CArmPhotonElectronRadiationRecordStorage	Transfer
1.2.840.10008.5.1.4.1.1.481.20	Robotic-Arm Radiation Record Storage	RoboticArmRadiationRecordStorage	Transfer

4

Part 3 Addendum

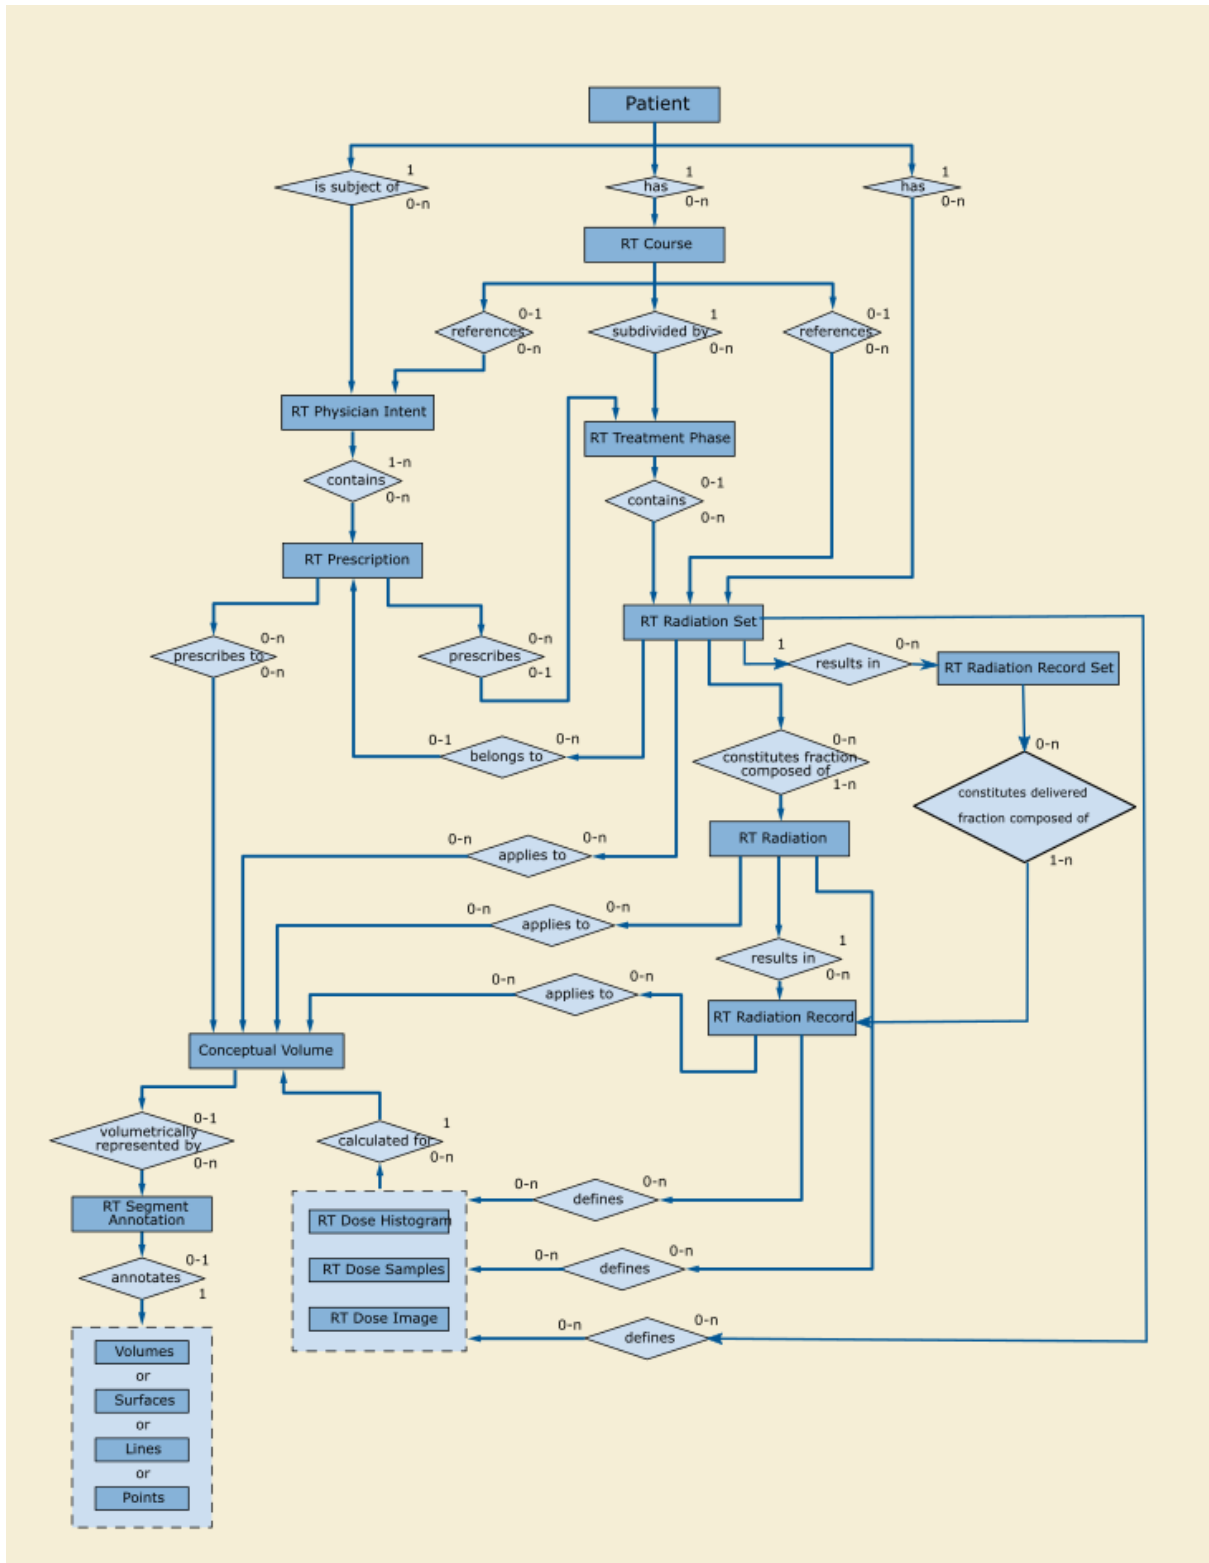

6 **Update Figure 7.14-1:**
 - add the box “RT Radiation Record Set”
 8 - add the related diamond “results in” and “constitutes delivered fraction composed of”
 - add the related arrows and multiplicities

10 **7.14 EXTENSION OF THE DICOM MODEL OF THE REAL-WORLD FOR RADIOTHERAPY SECOND GENERATION INFORMATION OBJECTS**

12 For the purpose of RT Second Generation SOP Classes the DICOM Model of the Real-World is described in this section. This subset of the real-world model covers the requirements for transferring information about planned and performed radiotherapeutic treatments and associated data.
 14

Figure 7.14-1 describes the most important elements involved in the radiotherapy domain in DICOM.

16

- 2 Note 1: IODs which contain a representation of Volumes, Surfaces, Lines, Points can be annotated by an RT Segment Annotation.
- 4 Note 2: For better readability the diagram only contains the most important relationships, e.g. all objects have a relation to the Patient, but not all of these relationships are part of this diagram.

Figure 7.14-1 DICOM MODEL OF THE REAL WORLD – RADIOTHERAPY

2

4 **Add the following columns in PS3.3 Section A.1.4, Table A.1-1 COMPOSITE INFORMATION OBJECT MODULES OVERVIEW – RADIOTHERAPY**

6

Add the following to PS3.3 Annex A:

2 **A.86 SECOND GENERATION RADIATION THERAPY**

A.86.1 RT Second Generation Objects

4 ...

A.86.1.1 RT Second Generation Common Information

6 ...

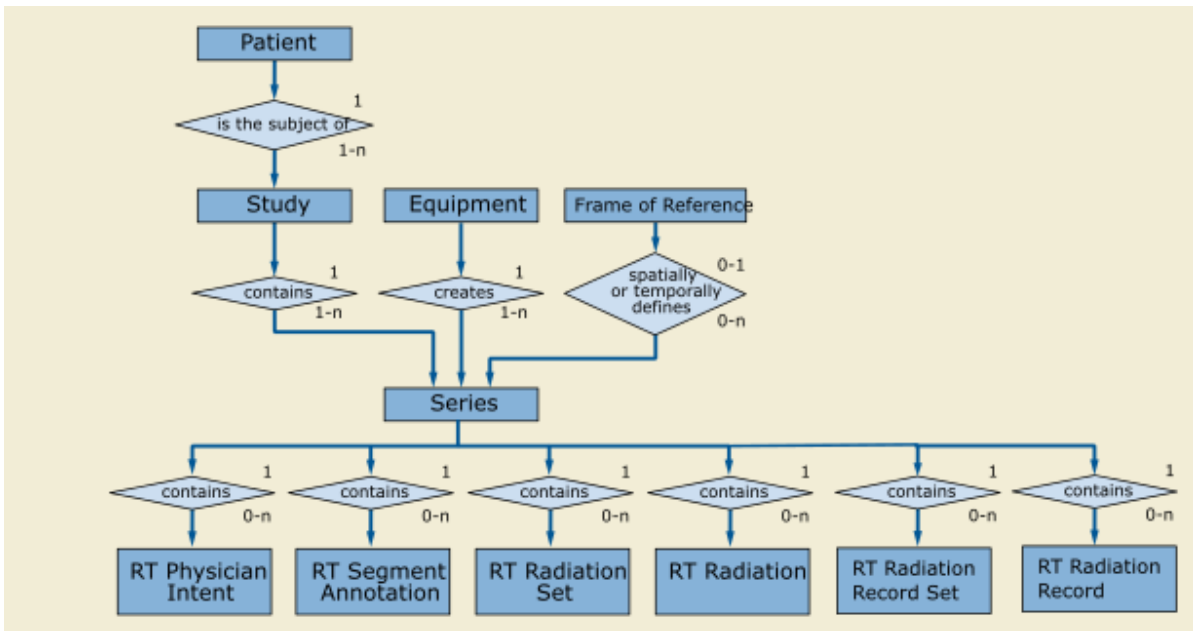

A.86.1.1.1 Second Generation Radiation Therapy Entity-Relationship Model

8 ...

Update Figure A.86.1.1.1-1 in PS3.3 Annex A with the following:

- add box "RT Radiation Record Set"
- add box "RT Radiation Record"

12

14 **Figure A.86.1.1.1-1. RT Second Generation IOD information model**

16 Add section A.86.1.4.4.4 to the following section to PS3.3 Annex A, A.86.1.4.4 RT Radiation Set IOD Constraints:

18

A.86.1.4 RT Radiation Set IOD2 **A.86.1.4.1 RT Radiation Set IOD Description**

...

4 **A.86.1.4.3 RT Radiation Set IOD Module Table****Table A.86.1.4-1. RT Radiation Set IOD Modules**

IE	Module	Reference	Usage

A.86.1.4.4 RT Radiation Set IOD Constraints8 **A.86.1.4.4.1 Modality Attribute**

...

10 **A.86.1.4.4.x RT Dose Contribution Module**

12 **Where dose contributions are not available at the time of RT Radiation Set definition and application (e.g., for emergency treatments) this Module may be absent. This does not exclude retrospective dose calculation and creation of associated RT Dose Image objects.**

14

Add the following to PS3.3 Annex A:

2 **A.86.1.8 RT Radiation Record Set Information Object Definition**

4 The RT Radiation Record Set IOD contains the record of a radiotherapy treatment that has been performed based on an RT Radiation Set SOP Instance.

A.86.1.8.1 RT Radiation Record Set IOD Description

6 **A.86.1.8.2 RT Radiation Record Set IOD Entity-Relationship Model**

See Figure A.86.1.1.1-1.

8 **A.86.1.8.3 RT Radiation Record Set IOD Module Table**

**Table A.86.1.8-1
RT Radiation Record Set IOD Modules**

IE	Module	Reference	Usage
Patient	Patient	C.7.1.1	M
	Clinical Trial Subject	C.7.1.3	U
Study	General Study	C.7.2.1	M
	Patient Study	C.7.2.2	U
	Clinical Trial Study	C.7.2.3	U
Series	General Series	C.7.3.1	M
	Clinical Trial Series	C.7.3.2	U
	Enhanced RT Series	C.36.3	M
Equipment	General Equipment	C.7.5.1	M
	Enhanced General Equipment	C.7.5.2	M
RT Delivered Radiation	General Reference	C.12.4	M
	RT Radiation Record Set	C.36.20	M
	RT Dose Contribution Record	C.36.21	C - Required if the dose delivered is tracked.
	SOP Common	C.12.1	M
	Common Instance Reference	C.12.2	M
	Radiotherapy Common Instance	C.36.4	M

12 **A.86.1.8.4 RT Radiation Record Set IOD Constraints**

A.86.1.8.4.1 RT Dose Contribution Record

14 Where dose contributions are not available at the time of delivery of the radiotherapeutic treatments specified by the RT Radiation Set IOD (e.g., for emergency treatments), the RT Dose Contribution Record Module may be absent. This does not exclude retrospective dose calculation and creation of
16 associated RT Dose Image objects.

A.86.1.9 RT Radiation Salvage Record Information Object Definition**2 A.86.1.9.1 RT Radiation Salvage Record IOD Description**

4 The RT Radiation Salvage Record IOD contains the record of a complete or partial fraction of therapeutic radiation delivered using any therapeutic device where recording by the modality-specific RT Radiation Record IOD was not possible.

6 A device usually creates RT Radiation Record SOP Instances using modality-specific RT Radiation Record IODs and transfers these Instances to a system that captures treatment records. If this
8 process fails (e.g. because of failed transfer operations) and the recorded SOP Instances are not recoverable from the device, the RT Radiation Salvage Record IOD may be used to represent
10 radiation delivery captured by a manual entry of the delivered treatment. Systems providing manual entry capabilities might not be able to create a modality-specific RT Radiation Record SOP Instance
12 covering all device-specific parameters in question and/or the user might not know all the details. Therefore, the modality-specific RT Radiation Record IODs cannot be properly populated. The RT
14 Radiation Salvage Record IOD allows essential information to be recorded.

A.86.1.9.2 RT Radiation Salvage Record IOD Entity-Relationship Model

16 See Figure A.86.1.1.1-1.

A.86.1.9.3 RT Radiation Salvage Record IOD Module Table

18

**Table A.86.1.9-1
RT Radiation Salvage Record IOD Modules**

IE	Module	Reference	Usage
Patient	Patient	C.7.1.1	M

	RT Radiation Salvage Record Module	C.36.23	M
	SOP Common	C.12.1	M

	Common Instance Reference	C.12.2	M
	Radiotherapy Common Instance	C.36.4	M

2 **A.86.1.9.4 RT Radiation Salvage Record IOD Constraints**

A.86.1.9.4.1 Modality Attribute

4 The value of Modality (0008,0060) shall be RTRAD.

A.86.1.9.4.2 RT Delivery Device Common Module

6 The Equipment Frame of Reference UID (300A,0675) shall have the value used by the SOP Instance referenced in the Referenced RT Instance Sequence (300A,0631) of the RT Radiation Record
8 Common Module.

The following code sequences shall have values from the identified CIDs:

Code Sequence	CID
Radiation Dosimeter Unit Sequence (300A,0658)	Defined CID is the CID specified for the SOP Instance referenced in the Referenced RT Instance Sequence (300A,0631) of the RT Radiation Record Common Module.

10

A.86.1.9.4.3 RT Radiation Record Common Module

12 The value of RT Record Flag (300A,0639) shall be YES.

The value of Treatment Record Content Origin (300A,0709) shall be USER.

14 The following code sequences shall have values from the identified CIDs:

Code Sequence	CID
RT Treatment Technique Code Sequence (3010,0080)	Defined CID is the CID specified for the SOP Instance referenced in the Referenced RT Instance Sequence (300A,0631) of the RT Radiation Record Common Module.
Treatment Machine Special Mode Sequence (300A,0635)	Defined CID is the CID specified for the SOP Instance referenced in the Referenced RT Instance Sequence (300A,0631) of the RT Radiation Record Common Module.

16 **A.86.1.9.4.4 Radiotherapy Common Instance Module**

The following code sequences shall have values from the identified CIDs:

Code Sequence	CID
Author Identification Sequence (3010,0019)	Defined CID for Organizational Role Code Sequence (0044,010A) is CID 9562 "Radiotherapy Treatment Delivery Person Roles"

2 **A.86.1.9.4.5 Frame of Reference Module**

4 The Frame of Reference UID (0020,0052) identifies the patient-based Frame of Reference while the
 6 therapeutic radiation was delivered. The Frame of Reference UID relates the geometric parameters
 8 of this SOP Instance to other SOP Instances such as Images, Segmentations, etc. If the patient
 moves with respect to the patient positioning device between the delivery recorded by the current
 SOP Instance and another SOP Instance, a new Frame of Reference UID shall be issued for any
 SOP Instances created after the move. See also C.7.4.1.

10 The relationship between the patient-oriented coordinate system identified by this Frame of
 Reference and the Equipment Coordinate System is described in 10.39.1.

A.86.1.10 C-Arm Photon-Electron Radiation Record Information Object Definition

12 **A.86.1.10.1 C-Arm Photon-Electron Radiation Record IOD Description**

14 The C-Arm Photon-Electron Radiation Record IOD contains the record of a radiotherapy treatment
 that has been performed using a C-Arm Photon-Electron Radiation SOP Instance.

A.86.1.10.2 C-Arm Photon-Electron Radiation Record IOD Entity-Relationship Model

16 See Figure A.86.1.1.1-1.

A.86.1.10.3 C-Arm Photon-Electron Radiation Record IOD Module Table

18

**Table A.86.1.x3-1
 C-Arm Photon-Electron Radiation Record IOD Modules**

IE	Module	Reference	Usage
Patient	Patient	C.7.1.1	M
	Clinical Trial Subject	C.7.1.3	U
Study	General Study	C.7.2.1	M
	Patient Study	C.7.2.2	U
	Clinical Trial Study	C.7.2.3	U

	RT Delivery Device Common	C.36.12	M
	RT Radiation Record Common	C.36.22	M
	C-Arm Photon-Electron Delivery Device	C.36.14	M

	C-Arm Photon-Electron Beam	C.36.15	M
	SOP Common	C.12.1	M
	Common Instance Reference	C.12.2	M
	Radiotherapy Common Instance	C.36.4	M

2 **A.86.1.10.4 C-Arm Photon-Electron Radiation Record IOD Constraints**

A.86.1.10.4.1 Modality Attribute

4 The value of Modality (0008,0060) shall be RTRAD.

A.86.1.10.4.2 RT Delivery Device Common Module

6 The Equipment Frame of Reference UID (300A,0675) shall be 1.2.840.10008.1.4.3.1, which identifies the IEC 61217 Fixed Coordinate System Frame of Reference, see C.36.12.2.1.

8 The following code sequences shall have values from the identified CIDs:

Code Sequence	CID
Radiation Dosimeter Unit Sequence (300A,0658)	Defined CID 9552 "C-Arm Photon-Electron Dosimeter Units"

10 The RT Device Distance Reference Location Code Sequence (300A,0659) shall contain the value (130358, DCM, "Nominal Radiation Source Location").

12 **A.86.1.10.4.3 RT Radiation Record Common Module**

14 The value of RT Record Flag (300A,0639) shall be YES. The value of RT Radiation Physical and Geometric Content Detail Flag (300A,0638) shall be IDENT_ONLY.

The following code sequences shall have a value from the identified CIDs:

Code Sequence	CID
RT Treatment Technique Code Sequence (3010,0080)	Defined CID 9511 "General External Radiotherapy Procedure Techniques"
Treatment Machine Special Mode Sequence (300A,0635)	Defined CID 9543 "Radiotherapy Treatment Machine Modes"

16

A.86.1.10.4.4 Radiotherapy Common Instance Module

18 The following code sequences shall have values from the identified CIDs:

Code Sequence	CID
Author Identification Sequence (3010,0019)	Defined CID for Organizational Role Code Sequence (0044,010A) is CID 9562 "Radiotherapy Treatment Delivery Person Roles"

A.86.1.10.4.5 Frame of Reference Module

2 See A.86.1.9.4.5.

A.86.1.11 Tomotherapeutic Radiation Record Information Object Definition**4 A.86.1.11.1 Tomotherapeutic Radiation Record IOD Description**

6 The Tomotherapeutic Radiation Record IOD contains the record of a radiotherapy treatment that has been performed using a Tomotherapeutic Radiation SOP Instance.

A.86.1.11.2 Tomotherapeutic Radiation Record IOD Entity-Relationship Model

8 See Figure A.86.1.1.1-1.

A.86.1.11.3 Tomotherapeutic Radiation Record IOD Module Table

12

A.86.1.11.4 Tomotherapeutic Radiation Record IOD Constraints

A.86.1.11.4.1 Modality Attribute

The value of Modality (0008,0060) shall be RTRAD.

A.86.1.11.4.2 RT Delivery Device Common Module

The Equipment Frame of Reference UID (300A,0675) shall be 1.2.840.10008.1.4.3.1, which identifies the IEC 61217 Fixed Coordinate System Frame of Reference, see C.36.12.2.1.

The following code sequences shall have values from the identified CIDs:

Code Sequence	CID
Radiation Dosimeter Unit Sequence (300A,0658)	Defined CID 9557 “Tomotherapeutic Dosimeter Units”

8

The RT Device Distance Reference Location Code Sequence (300A,0659) shall contain the value (130358, DCM, “Nominal Radiation Source Location”).

10

A.86.1.11.4.3 RT Radiation Record Common Module

The value of RT Record Flag (300A,0639) shall be YES. The value of RT Radiation Physical and Geometric Content Detail Flag (300A,0638) shall be IDENT_ONLY.

12

The following code sequences shall have a value from the identified CIDs:

14

Code Sequence	CID
RT Treatment Technique Code Sequence (3010,0080)	Defined CID 9512 “Tomotherapeutic Radiotherapy Procedure Techniques”
Treatment Machine Special Mode Sequence (300A,0635)	Defined CID 9543 “Radiotherapy Treatment Machine Modes”

A.86.1.11.4.4 Radiotherapy Common Instance Module

The following code sequences shall have values from the identified CIDs:

16

Code Sequence	CID
Author Identification Sequence (3010,0019)	Defined CID for Organizational Role Code Sequence (0044,010A) is CID 9562 “Radiotherapy Treatment Delivery Person Roles”

18

A.86.1.11.4.5 Frame of Reference Module

See A.86.1.9.4.5.

20

A.86.1.12 Robotic-Arm Radiation Record Information Object Definition

A.86.1.12.1 Robotic-Arm, Radiation Record IOD Description

The Robotic-Arm Radiation Record IOD contains the record of a radiotherapy treatment that has been performed using a Robotic-Arm Radiation SOP Instance.

22

24

A.86.1.12.2 Robotic-Arm Radiation Record IOD Entity-Relationship Model

2 See Figure A.86.1.1.1-1.

A.86.1.12.3 Robotic-Arm Radiation Record IOD Module Table

4

**Table A.86.1.12-1
Robotic-Arm Radiation Record IOD Modules**

IE	Module	Reference	Usage
Patient	Patient	C.7.1.1	M
	Clinical Trial Subject	C.7.1.3	U
Study	General Study	C.7.2.1	M
	Patient Study	C.7.2.2	U
	Clinical Trial Study	C.7.2.3	U

6

A.86.1.12.4 Robotic-Arm Radiation Record IOD Constraints

8 **A.86.1.12.4.1 Modality Attribute**

The value of Modality (0008,0060) shall be RTRAD.

10 **A.86.1.12.4.2 RT Delivery Device Common Module**

12 The Equipment Frame of Reference UID (300A,0675) shall be 1.2.840.10008.1.4..3.2, which identifies the Standard Robotic-Arm Coordinate System Frame of Reference, see C.36.12.2.2.

The following code sequences shall have values from the identified CIDs:

Code Sequence	CID
Radiation Dosimeter Unit Sequence (300A,0658)	Defined CID 9559 "Robotic Delivery Dosimeter Units"

2

The RT Device Distance Reference Location Code Sequence (300A,0659) shall contain the value (130358, DCM, "Nominal Radiation Source Location").

4

A.86.1.12.4.3 RT Radiation Record Common Module

The value of RT Record Flag (300A,0639) shall be YES. The value of RT Radiation Physical and Geometric Content Detail Flag (300A,0638) shall be IDENT_ONLY.

6

The following code sequences shall have a value from the identified CIDs:

8

Code Sequence	CID
RT Treatment Technique Code Sequence (3010,0080)	Defined CID 9523 "Robotic Radiation Procedure Techniques"
Treatment Machine Special Mode Sequence (300A,0635)	Defined CID 9543 "Radiotherapy Treatment Machine Modes"

10 A.86.1.12.4.4 Radiotherapy Common Instance Module

The following code sequences shall have values from the identified CIDs:

Code Sequence	CID
Author Identification Sequence (3010,0019)	Defined CID for Organizational Role Code Sequence (0044,010A) is CID 9562 "Radiotherapy Treatment Delivery Person Roles"

12

A.86.1.12.4.5 Frame of Reference Module

14 See A.86.1.9.4.5.

Append the following in PS3.3 Annex C:**2 C.7.4.2.1.4 Acquisition Time Synchronized**

4 The Acquisition Time Synchronized (0018,1800) Attribute specifies whether Acquisition DateTime
6 (0008,002A) of the Waveform Identification Module or the General Image Module represents an
accurate synchronized timestamp for the acquisition of the waveform and/or image data. For
triggered multi-frame images, the Acquisition DateTime applies to the trigger for the first image frame
(see Attribute Image Trigger Delay (0018.1067) in the Cine Module).

8 Note The degree of precision of the Acquisition DateTime and its accuracy relative to the external clock are
not specified, but need to be appropriate for the clinical application.

10 For IODs that include the SR Document Content Module, the Acquisition Time Synchronized
12 (0018,1800) Attribute specifies whether Observation DateTime (0040,A032) of Items in Content
Sequence (0040,A730) of the SR Document Content Module represents an accurate synchronized
timestamp for the Item.

14 **For IODs that include the RT Radiation Record Common Module, the Acquisition Time**
16 **Synchronized (0018,1800) Attribute specifies whether the following Attributes represent a**
synchronized timestamp.

18 **- Recorded RT Control Point DateTime (300A,073A)**

- Interlock DateTime (300A,0741)

20 Add the following section to PS3.3 Annex C, section C.36.2.2.8.1:**C.36.2.2.8.1.5 Referenced Defined Device Index**

22 The Referenced Defined Device Index (300A,0602) provides the facility to relate devices from one
24 Instance to the other. Device Macros such as the RT Beam Limiting Device Definition Macro are
used in Sequences which list the devices used in the context of a SOP Instance. Each device is
26 identified by the Device Index (3010,0039). These devices may be described in other related SOP
Instances. The values of Device Index (3010,0039) are not required to be the same in different SOP
Instances.

28 For example, an RT Radiation Instance may contain the RT Beam Limiting Device Definition
30 Sequence (300A,064D), listing the Beam Limiting Devices to be used for treatment. A related RT
Radiation Record Instance for the same type of delivery device will contain the same Sequences.
However, the collection of devices used may not be the same:

32 E.g., the RT Radiation Instance may describe a treatment that contains three Items with the following
indices:

- 34 • Device Index = 1: Type (130331, DCM, "Leaf Pairs") with one leaf pair and the orientation
(130334, DCM, "X Orientation"), representing X-Jaws
- 36 • Device Index = 2: Type (130331, DCM, "Leaf Pairs") with one leaf pair and the orientation
(130335, DCM, "Y Orientation"), representing Y-Jaws
- 38 • Device Index = 3: Type (130331, DCM, "Leaf Pairs") with 80 leaf pairs and the orientation
(130334, DCM, "X Orientation"), representing an X-MLC

40 However, the treatment may have been executed on a different machine which has the X-Jaws and
the X-MLC, but a fixed collimator in the Y direction instead of the Y-Jaws. Therefore, the Y-Jaws will

not be recorded as they have not been used. Also, the fixed collimator in Y direction is not recorded, as this is not a device which is part of the RT Beam Limiting Device Definition Sequence (300A,064D). The Referenced Defined Device Index (300A,0602) will then point to the indices in the referenced RT Radiation Instance to annotate which device in the RT Radiation Record corresponds to the device in the RT Radiation. In this case, the RT Radiation Record would contain the devices as listed in the following:

- Device Index = 1: Type (130331, DCM, "Leaf Pairs") with one leaf pair and the orientation (130334, DCM, "X Orientation"), representing X-Jaws
-> Referenced Defined Device Index = 1
- Device Index = 2: Type (130331, DCM, "Leaf Pairs") with 80 leaf pairs and the orientation (130334, DCM, "X Orientation"), representing an X-MLC
-> Referenced Defined Device Index = 3

Make the following changes to PS3.3 Annex C in all Attribute descriptions for Referenced Defined Device Index (300A,0602) in the following tables:

Table C.36.2.2.8-1 RT Beam Limiting Devices Definition Macro Attributes

Table C.36.2.2.10-1 Wedges Definition Macro Attributes

Table C.36.2.2.12-1 Compensators Definition Macro Attributes

Table C.36.2.2.13-1 Blocks Definition Macro Attributes

Table C.36.2.2.14-1 RT Accessory Holders Definition Macro Attributes

Table C.36.2.2.15-1 General Accessories Definition Macro Attributes

Table C.36.2.2.16-1 Boluses Definition Macro Attributes

...			
>Device Index	(3010,0039)	1	Index of the Device in this Sequence. The value shall start at 1 and increase monotonically by 1.
>Referenced Defined Device Index	(300A,0602)	1C	Device Index value that links the device defined by this Sequence Item to the corresponding device in an RT Radiation Instance. The description device identification of the two devices may or may not be the same. The value is the index of a device in the RT Beam Limiting Device Definition Sequence (300A,064D) within the single SOP Instance

			referenced by Referenced RT Instance Sequence (300A,0631). Required if the Instance referenced in Referenced RT Instance Sequence (300A,0631) contains the device that corresponds to the device defined by this Sequence Item. See C.36.2.2.8.1.5.
...			

2 **Update the following in PS3.3 Annex C:**

C.36.2.2.4 RT Treatment Position Macro

4

Table C.36.2.2.4-1. RT Treatment Position Macro Attributes

Attribute Name	Tag	Type	Attribute Description
...			
Referenced RT Patient Setup Sequence	(300A,0632)	1C	References the RT Patient Setup SOP Instance that was used as the setup instruction for the patient prior to delivery of the radiation. Required if there was a Patient Setup SOP Instance available providing the instructions to the delivery system. Only a single Item shall be included in this Sequence.
<i>>Include Table 10-11 "SOP Instance Reference Macro Attributes".</i>			
Treatment Position Sequence	(300A,063F)	1C	Patient positions during treatment, being prescribed or recorded. Required if the SOP Class of the SOP Instance including this Module is not RT Radiation Salvage Record Storage ("1.2.840.10008.5.1.4.1.1.481.17"). May be present otherwise. One or more Items shall be included in this Sequence.
>Treatment Position Index	(300A,0606)	1	Index of this Item in this Sequence. The value shall start at 1 and increase monotonically by 1.
<i>>Include Table 10.39-1 "Patient to Equipment Relationship Macro Attributes".</i>			<i>DCID 9553 "Treatment Points".</i>

6

C.36.2.2.5 RT Control Point General Macro

- 2 This Macro specifies the base Attributes for the definition of an RT Radiation Control Point.

Table C.36.2.2.5-1. RT Control Point General Macro Attributes

Attribute Name	Tag	Type	Attribute Description
RT Control Point Index	(300A,0600)	1	The index of the RT Control Point within the Sequence where this Macro is included. RT Control Points shall be executed in the order of the RT Control Point Index. The value shall start at 1 and increase monotonically by 1 within the Sequence where this Macro is included.
Cumulative Meterset	(300A,063C)	1C	Meterset at the RT Control Point. The units are specified by Radiation Dosimeter Unit Sequence (300A,0658). For the Item with RT Control Point Index equal 1, the Cumulative Meterset shall be equal to 0.0. Required if RT Radiation Physical and Geometric Content Detail Flag (300A,0638) equals FULL or IDENT_ONLY or RT Record Flag (300A,0639) equals YES and if the conditions in Section C.36.2.2.5.1.1 are satisfied. May be present otherwise only if the conditions in Section C.36.2.2.5.1.1 are satisfied. See Section C.36.2.2.5.1.3 and C.36.2.2.5.1.4.
Referenced Treatment Position Index	(300A,060B)	1C	The value of Treatment Position Index (300A,0606) from the Treatment Position Sequence (300A,063F) within this IOD that this RT Control Point refers to. Required if Treatment Position Sequence (300A,063F) is present and the conditions in Section C.36.2.2.5.1.1 are satisfied.
<u>Recorded RT Control Point DateTime</u>	(300A,073A)	1C	<u>Date and time of the Recorded RT Control Point.</u> <u>For all but the final Control Point this shall be the date and time when the delivery of radiation at this Control Point began. For the final Control Point this shall be the date and time when the previous control point ended.</u> <u>Required if RT Record Flag (300A,0639) equals YES and if the SOP Class of the SOP Instance including this Module is not RT Radiation Salvage Record Storage (“1.2.840.10008.5.1.4.1.1.481.17”).</u> <u>May be present otherwise only if RT Record Flag (300A,0639) equals YES.</u>

Attribute Name	Tag	Type	Attribute Description
<u>Referenced Radiation RT Control Point Index</u>	<u>(300A,073B)</u>	<u>2C</u>	<p><u>The value of RT Control Point Index (300A,0600) of the RT Control Point in the RT Radiation SOP Instance referenced by Referenced RT Instance Sequence (300A,0631) in this Instance.</u></p> <p><u>Required if RT Record Flag (300A,0639) equals YES and if the recorded RT Control Point Index corresponds to a planned RT Radiation Control Point Index.</u></p>

2 C.36.10.1 RT Radiation Set Attribute Description

4 C.36.10.1.1 RT Radiation Set Intent, RT Radiation Record Set Usage and RT Radiation Usage

6 Defined Terms for RT Radiation Set Intent (300A,0637), RT Radiation Set Usage (300A,0707) and RT Radiation Usage (300A,0701) are

TREATMENT

8 ~~The RT Radiation Set This Instance~~ is for ~~the purpose performing or recording of~~ treatment delivery.

10 PLAN_QA

12 ~~The RT Radiation Set This Instance~~ is for validating ~~or recording~~ the patient-specific dose. For example, by delivering the RT Radiations to a phantom and comparing the calculated dose to the phantom with actual measurements made in the phantom.

14 MACHINE_QA

16 ~~The RT Radiation Set This Instance~~ is for ~~performing or recording~~ system quality assurance and calibration (geometric, dosimetric or both) procedures of the delivery machine and is not patient-specific.

18 RESEARCH

20 ~~The RT Radiation Set This Instance~~ is for performing ~~or recording~~ research and is not delivered to a patient.

SERVICE

22 ~~The RT Radiation Set This Instance~~ is for ~~performing or recording~~ diagnostics, ~~calibration or and machine~~ assessment ~~of machine repair or to perform measurements for a maintenance or calibration operation~~ by a service technician.

...

26 C.36.11 RT Dose Contribution Module

28 The RT Dose Contribution Module contains information about the contribution of dose of the RT Radiations referenced by this RT Radiation Set IOD. Dose contributions refer to the RT Radiations delivering the dose and to anatomical structures receiving the dose.

2 Note that an anatomical structure (as defined by the Conceptual Volume Macro) can either be a
 4 textually tagged definition, or a reference to a Conceptual Volume defined in the RT Segment
 Annotation IOD. In all cases, Conceptual Volumes are identified by a UID which allows accumulation
 of dose to a given Conceptual Volume across RT Radiation Sets and comparison with prescribed
 Dosimetric Objectives.

6 Dose contributions are defined using Meterset values. The definition points in the Meterset to Dose
 Mapping Sequence may or may not align with the Meterset values at the Control Points of the RT
 8 Radiation SOP Instance. For example, where a dose deposition between Control Points cannot be
 determined individually per segment or where this definition is not useful, the lookup table may just
 10 contain the Meterset of first and last Control Points. The Meterset and dose contribution of the first
 Control Point are always zero. For further details see Section C.36.11.1.1.

12 ~~Where dose contributions are not available at the time of RT Radiation Set definition and
 application (e.g., for emergency treatments) this Module may be absent. This does not
 14 exclude retrospective dose calculation and creation of associated RT Dose Image objects.~~

Table C.36.11-1. RT Dose Contribution Module Attributes

16

Attribute Name	Tag	Type	Attribute Description
Radiation Dose Identification Sequence	(300A,0618)	1	Parameters to identify and scope Identifies the dose values that are delivered by this RT Radiation Set SOP Instance. One or more Items shall be included in this Sequence.
>Radiation Dose Identification Index	(300A,0603)	1	Index of this Item in this Sequence. The value shall start at 1 and increase monotonically by 1.
...			
Radiation Dose Sequence	(300A,0617)	1	Parameters that describe dose contributed by referenced RT Radiation SOP instances. For every SOP instance referenced in RT Radiation Sequence (300A,0616) exactly one item shall be present in this Sequence.
>Referenced RT Radiation Sequence	(300A,0630)	1	References the RT Radiation SOP Instance that describes parameters for dose delivery. Only a single Item shall be included in this Sequence.
>>Include Table 10-11 "SOP Instance Reference Macro Attributes".			
...			
>Expected In-Vivo Measurement Values Sequence	(300A,0621)	1C	Expected values against which in-vivo measurements may be compared. Required if expected values are calculated for in-vivo measurement for this RT Radiation SOP Instance.

Attribute Name	Tag	Type	Attribute Description
			One or more Items shall be included in this Sequence.
>>Expected In-Vivo Measurement Value Index	(300A,0622)	1	Index of this Item in this Sequence. The value shall start at 1 and increase monotonically by 1.
>>Radiation Dose In-Vivo Measurement Label	(300A,0623)	1	Label to identify the in-vivo measurement point. See Section 10.31.1.1.
>>Radiation Dose Central Axis Displacement	(300A,0624)	1C	Displacement (x,y) in mm of the measurement point from the central axis along the x-axis and y-axis of the Beam Modifier Definition Plane. Required if a central beam axis is defined for the Treatment Delivery Device and the Radiation Dose Measurement Point Coordinates (300A,0627) is not present.
>>Meterset to Dose Mapping Sequence	(300A,0620)	1	Mapping of Cumulative Meterset (300A,063C) to Radiation Dose Value (300A,0625). One or more Items shall be included in this Sequence.
>>>Cumulative Meterset	(300A,063C)	1	Cumulative Meterset where a dose value is delivered. See C.36.11.1.1.
>>>Radiation Dose Value	(300A,0625)	1	Dose Value in Gy at the measurement point. See C.36.11.1.5.
>>Radiation Dose Source to Skin Distance	(300A,0626)	2	Distance in mm from the nominal Radiation Source location to the patient skin along the central beam axis from the source to the measurement point.
>>Radiation Dose Source to External Contour Distance	(300A,0628)	2	Distance in mm from the nominal Radiation Source location to the External Contour along the central beam axis from the source to the measurement point including devices associated with the patient anatomy model. For dosimetric purposes this value may differ from the Radiation Dose Source to Skin Distance(300A,0626). See Section C.36.11.1.4.
>>Radiation Dose Measurement Point Coordinates	(300A,0627)	1C	Coordinates (x,y,z) in mm in the DICOM Patient Coordinate System of the measurement point. Required if Radiation Dose Central Axis Displacement (300A,0624) is not present.

2 Update the following in PS3.3 Annex C, and extract many of the Attributes in to the new Macro macro1.

C.36.13 RT Radiation Common Module

4 The RT Radiation Common Module contains the Attributes shared by all RT Radiation IODs used for radiation treatment delivery.

6 **Table C.36.13-1. RT Radiation Common Module Attributes**

Attribute Name	Tag	Type	Attribute Description
<i>Include Table 10.9.1-1 "Enhanced Content Identification Macro Attributes"</i>			
<i>Include Table C.36.2.1.6-1 "RT Radiation Common Base Macro Attributes"</i>			
RT Radiation Physical and Geometric Content Detail Flag	(300A,0638)	1	The level of detail of content within this SOP Instance. Enumerated Values: FULL —The physical and geometric parameters of all devices are fully defined and dosimetric information is present. This level of detail is typically present after volumetric planning. IDENT_ONLY —The physical and geometric parameters of all devices may not be fully specified, but the devices can be identified and dosimetric information is present. This level of detail is typically present after non-volumetric planning (e.g., 2D planning). GEOMETRY_ONLY —The geometric parameters of all devices are fully specified, but no dosimetric information is present. This level of detail is typically present after Virtual Simulation.
RT Record Flag	(300A,0639)	1	Whether or not device parameters about actual delivery of treatment to a patient have been recorded. Enumerated Values: YES —Values in this Instance are a record of a delivered treatment, based on e.g., read-outs or measurements. NO —Values in this Instance are a specification of a treatment to be delivered, e.g., by a treatment planning system.
RT Treatment Technique Code Sequence	(3010,0080)	1	Type of treatment technique. Only a single Item shall be included in this Sequence. See Section C.36.13.1.1.
<i>>Include Table 8.8-1 "Code Sequence Macro Attributes".</i>			<i>CID is defined in the IOD including this Module.</i>
<i>Include Table C.36.2.2.4-1 "RT Treatment Position Macro Attributes".</i>			<i>See Section C.36.13.1.2.</i>

Attribute Name	Tag	Type	Attribute Description
RT Tolerance Set Sequence	(300A,0629)	3	A set of tolerance values to be applied to parameters used for delivery of the RT Radiation. Only a single Item is permitted in this Sequence.
>Include Table C.36.2.2.17-1 "RT Tolerance Set Macro Attributes".			
Treatment Time Limit	(300A,062E)	3	The maximum delivery time in seconds. See Section C.36.13.1.3.
Treatment Machine Special Mode Code Sequence	(300A,0635)	1C	A mode of operation on the treatment machine. Required if a special delivery mode is used for treatment. Only a single Item shall be included in this Sequence. See Section C.36.13.1.4.
>Include Table 8.8-1 "Code Sequence Macro Attributes".		Defined CID is defined in the IOD including this Module.	

2 C.36.13.1 RT Radiation Common Attribute Descriptions

C.36.13.1.1 Radiotherapy Procedure Technique Sequence

4 ~~See C.36.2.1.6.1.1. The RT Treatment Technique Code Sequence (3010,0080) describes the treatment technique, i.e., how the radiation beam is shaped and targeted.~~

6 C.36.13.1.2 RT Treatment Position Macro

8 ~~See C.36.2.1.6.1.2. The RT Treatment Position Macro describes how the patient is to be positioned with respect to the delivery device for treatment.~~

10 ~~The behavior of the machine regarding the patient position between specified Control Points is outside the scope of this Standard. Communicating devices shall agree on this behavior.~~

C.36.13.1.3 Treatment Time Limit

12 The Treatment Time Limit (300A,062E) is the maximum time span allowed to deliver a single fraction of this RT Radiation SOP instance. The behavior of the treatment delivery device on exceeding the Treatment Time Limit is up to the implementation. Treatment is expected to terminate upon reaching the Treatment Time Limit (300A,062E) independent of the Meterset and so this Attribute should have a value that accommodates normal variations in delivery.

C.36.13.1.4 Treatment Machine Special Mode Sequence

18 ~~See C.36.2.1.6.1.3. The Treatment Machine Special Mode Code Sequence (300A,0635) contains a code, for example, (130341, DCM, "Total Body Irradiation") or (130342, DCM, "Total Skin Irradiation"), which selects a set of vendor- and machine-specific parameters that alter the treatment parameters and/or safety constraints.~~

22

Add C.36.2.1.6 to PS3.3 Annex C.36.2.1:

C.36.2 RT Second Generation Macros

2 C.36.2.1 RT Second Generation General Purpose Macros

...

4 C.36.2.1.6 RT Radiation Common Base Macro

6 The Radiation Fraction Pattern Macro specifies the intended fraction pattern to be used to deliver the radiation treatment.

Table C.36.2.1.6-1. RT Radiation Common Base Macro Attributes

Attribute Name	Tag	Type	Attribute Description
RT Radiation Physical and Geometric Content Detail Flag	(300A,0638)	1	The level of detail of content within this SOP Instance. Enumerated Values: FULL The physical and geometric parameters of all devices are fully defined and dosimetric information is present. This level of detail is typically present after volumetric planning. IDENT_ONLY The physical and geometric parameters of all devices may not be fully specified, but the devices can be identified. This level of detail is typically present after non-volumetric planning (e.g., 2D planning) or in records of delivered treatments. GEOMETRY_ONLY The geometric parameters of all devices are fully specified, but no dosimetric information is present. This level of detail is typically present after Virtual Simulation.
RT Record Flag	(300A,0639)	1	Whether or not device parameters about actual delivery of treatment to a patient have been recorded. Enumerated Values: YES Values in this Instance are a record of a delivered treatment, based on e.g., read-outs or measurements. NO Values in this Instance are a specification of a treatment to be delivered, e.g., by a treatment planning system.
RT Treatment Technique Code Sequence	(3010,0080)	1C	Type of treatment technique. Only a single Item shall be included in this Sequence. Required if the SOP Class of the SOP Instance including this Module is not RT Radiation Salvage Record Storage ("1.2.840.10008.5.1.4.1.1.481.17"). May be present otherwise. See Section C.36.2.1.6.1.1.
<i>>Include Table 8.8-1 "Code Sequence Macro Attributes".</i>			<i>CID is defined in the IOD including this Module.</i>
<i>Include Table C.36.2.2.4-1 "RT Treatment Position Macro Attributes".</i>			<i>See Section C.36.2.1.6.1.2.</i>

Attribute Name	Tag	Type	Attribute Description
RT Tolerance Set Sequence	(300A,0629)	3	A set of tolerance values to be applied to parameters used for delivery of the RT Radiation. Only a single Item is permitted in this Sequence.
<i>>Include Table C.36.2.2.17-1 "RT Tolerance Set Macro Attributes".</i>			
Treatment Machine Special Mode Code Sequence	(300A,0635)	1C	A mode of operation on the treatment machine. Required if a special delivery mode is used for treatment and the SOP Class of the SOP Instance including this Module is not RT Radiation Salvage Record Storage ("1.2.840.10008.5.1.4.1.1.481.17"). May be present otherwise. Only a single Item shall be included in this Sequence. See Section C.36.2.1.6.1.3.
<i>>Include Table 8.8-1 "Code Sequence Macro Attributes".</i>		<i>Defined CID is defined in the IOD including this Module.</i>	

2 C.36.2.1.6.1 RT Radiation Common Attribute Descriptions

C.36.2.1.6.1.1 Radiotherapy Procedure Technique Sequence

4 The RT Treatment Technique Code Sequence (3010,0080) describes the treatment technique, i.e., how the radiation beam is shaped and targeted.

6 C.36.2.1.6.1.2 RT Treatment Position Macro

8 The RT Treatment Position Macro describes how the patient is to be positioned with respect to the delivery device for treatment.

10 The behavior of the machine regarding the patient position between specified Control Points is outside the scope of this Standard. Communicating devices shall agree on this behavior.

C.36.2.1.6.1.3 Treatment Machine Special Mode Sequence

12 The Treatment Machine Special Mode Code Sequence (300A,0635) contains a code, for example, (130341, DCM, "Total Body Irradiation") or (130342, DCM, "Total Skin Irradiation"), which selects a set of vendor- and machine-specific parameters that alter the treatment parameters and/or safety constraints.

16 **Add the following to PS3.3 Annex C.36:**

C.36.20 RT Radiation Record Set Module

18 The RT Radiation Record Set Module contains treatment-modality-independent information about a set of delivered RT Radiations.

20 The RT Radiation Record Set may refer to an RT Radiation Set SOP Instance that has been used to define the treatment delivery. It may also record ad hoc delivery.

22

**Table C.36.20-1
RT Radiation Record Set Module Attributes**

Attribute Name	Tag	Type	Attribute Description
<i>Include Table 10.9.2-1 "Extended Content Identification Macro"</i>			
Treatment Session UID	(300A,0700)	1	A unique identifier of the RT Treatment Session to which this Instance belongs.
Referenced RT Radiation Set Sequence	(300A,0702)	1C	The RT Radiation Set that contains the RT Radiation Instance(s) referenced by the Instances of the Referenced RT Radiation Record Sequence (300A,0703). Required if an RT Radiation Set Instance provided instructions to the treatment delivery system. Only a single Item shall be included in this Sequence.
<i>>Include Table 10-11 "SOP Instance Reference Macro Attributes"</i>			
RT Radiation Set Usage	(300A,0707)	1	A general indication of how the referenced RT Radiation Set was used. The Defined Terms are specified in C.36.10.1.1. This value may differ from the RT Radiation Set Intent (300A,0637) within the Instance referenced by the Referenced RT Radiation Set Sequence (300A,0702). See C.36.m1.1.4.
Referenced RT Radiation Record Sequence	(300A,0703)	1	RT Radiation Record SOP Instance(s) representing the record of the current treatment set that has been delivered. One or more Items shall be included in this Sequence. See C.36.20.1.1.
<i>>Include Table 10-11 "SOP Instance Reference Macro Attributes"</i>			
RT Radiation Set Delivery Number	(300A,0704)	1C	Count of the delivery of the referenced RT Radiation Set as represented by the current SOP Instance. Required if Referenced RT Radiation Set Sequence (300A,0702) is present and RT Radiation Set Usage (300A,0707) is TREATMENT. May be present otherwise. See C.36.20.1.2.

Clinical Fraction Number	(300A,0705)	1C	Count of the RT Treatment Fractions that have been delivered, irrespective of the RT Radiation Set(s) used. Required if Referenced RT Radiation Set Sequence (300A,0702) is present and RT Radiation Set Usage (300A,0707) is TREATMENT. May be present otherwise. See C.36.20.1.2.
RT Treatment Fraction Completion Status	(300A,0706)	1	Defines if the current SOP Instance records a complete treatment delivery of a RT Treatment Fraction. Enumerated Values: COMPLETE PARTIAL See C.36.20.1.3.

2 C.36.20.1 RT Radiation Record Set Attribute Descriptions

C.36.20.1.1 Referenced RT Radiation Record Sequence

4 All SOP Instances referenced in this Sequence shall be recorded by the same treatment device
6 (specified by the Treatment Device Identification Macro within the RT Delivery Device Common
Module).

8 An RT Radiation Record instance shall be referenced in exactly one RT Radiation Record Set
instance.

10 The Treatment Session UID within the RT Radiation Record Set shall be identical to those in the
Referenced RT Radiation Record instances.

The SOP Classes referenced in this Sequence shall contain the following Modules:

- 12 • Enhanced RT Series Module specified in section C.36.3.
- Radiotherapy Common Instance Module specified in section C.36.4.
- 14 • RT Delivery Device Common Module specified in section C.36.12.
- RT Radiation Record Common Module specified in section C.36.22.

16 C.36.20.1.2 RT Radiation Set Delivery Number and Clinical Fraction Number

18 The Clinical Fraction Number (300A,0705) tracks the clinical progress of treatment delivery. It is a
counter that represents the number of times that an RT Radiation Set Instance or any Instance
derived within an adaptive radiotherapy treatment process was delivered.

20 The RT Radiation Set Delivery Number (300A,0704) is a counter that represents the number of times
the referenced RT Radiation Set Instance has been delivered.

22 The RT Radiation Set Delivery Number (300A,0704) of the delivered RT Treatment Fraction shall
start with 1 for its first fraction and increase monotonically by 1, throughout all RT Radiation Record

2 Set Instances referencing the same RT Radiation Set Instance identified by its SOP Instance UID
 (0008,0018), see 7.14.10.

4 If the same RT Radiation Set is used for all treatments, the values of RT Radiation Set Delivery
 Number (300A,0704) and the Clinical Fraction Number (300A,0705) have the same values.

6 For some adaptive treatment approaches, details of the device parameters may be altered at the
 treatment session to accommodate the current position and shape of the patient. In this case, a new
 RT Radiation Set SOP Instance is used for the subsequent RT Treatment Fractions and the RT
 8 Radiation Set Delivery Number (300A,0704) re-starts at 1.

10 The Clinical Fraction Number (300A,0705) is continuously incremented to reflect the clinical progress
 of a therapeutic series of treatments. In the RT Radiation Record Set for the last of the intended RT
 Treatment Fractions, this value will be equal to the Number of Fractions (3010,007D) present in the
 12 corresponding RT Prescription.

Example

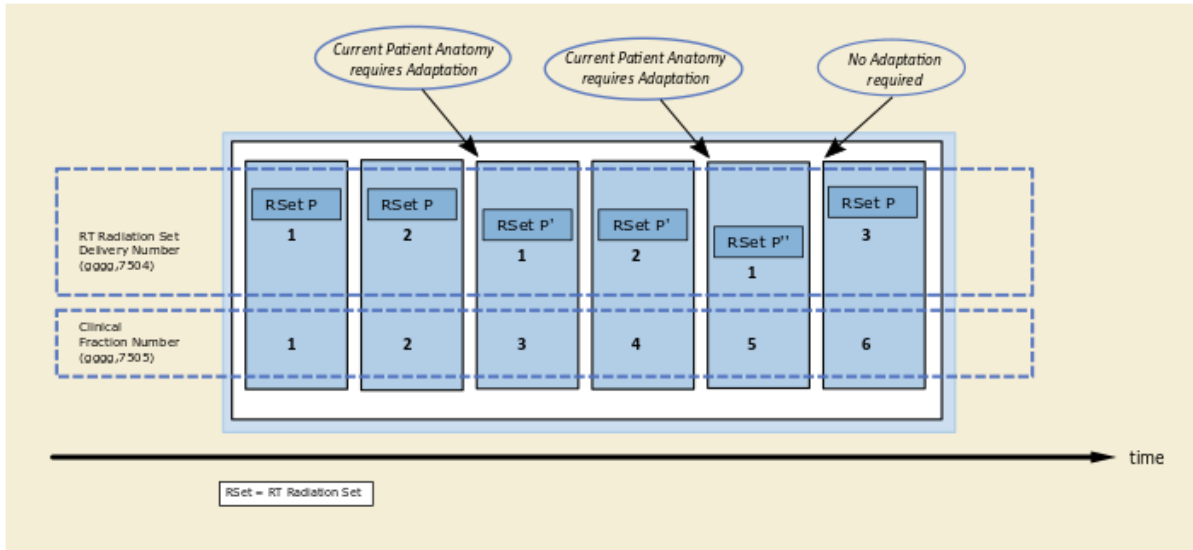

14 RT Radiation Set P contains RT Radiations A, B; Adapted RT Radiations indicated by (') and (''); RT
 Radiation Sets created are P, P' and P''.

16

**Table C.36.20-3
 Delivery of multiple RT Radiation Set Instances**

Treatment Session	RT Radiation Set	Delivered RT Radiations	Clinical Fraction Number (300A,0705)	RT Radiation Set Delivery Number (300A,0704)
1	P	A,B	1	1 (of P)
2	P	A,B	2	2 (of P)
3	P'	A',B'	3	1 (of P')
4	P'	A',B'	4	2 (of P')
5	P''	A'',B''	5	1 (of P'')
6	P	A,B	6	3 (of P)

18

2 **Figure C.36.20-1**
Delivery of a single RT Radiation Set Instance with Adaptive Treatments

4 **C.36.20.1.3 Complete versus Partial Fraction**

6 When there is an RT Radiation Record Instance present for all of the RT Radiation Instances for this
 8 RT Treatment Fraction and they all have a Treatment Delivery Continuation Flag (300A,0708) of NO
 and have an RT Treatment Termination Status (300A,0714) of NORMAL the value of RT Radiation
 RT Treatment Fraction Completion Status (300A,0706) shall be COMPLETE. The expression “all of
 10 the RT Radiation Instances” refers to the referenced Instances in the RT Radiation Set, to which this
 current RT Radiation Record Set refers.

Otherwise the value of RT Treatment Fraction Completion Status (300A,0706) shall be PARTIAL.

12 **Example**

RT Radiation Set P contains RT Radiations A and B.

14 RT Radiation Record Sets created are W, X, Y, and Z.

16 **Table C.36.20-2**
Delivery of a single RT Radiation Set Instance with Partial Treatments

Treatment Session	RT Radiation Set	Delivered RT Radiations	Treatment Delivery Continuation Flag (300A,0708)	RT Treatment Termination Status (300A,0714)	RT Radiation Record Set	RT Treatment Fraction Completion Status (300A,0706)	Clinical Fraction Number (300A,0705)	RT Radiation Set Delivery Number (300A,0704)
1	P	A	NO	NORMAL	W	PARTIAL	1	1
		B	NO	ABNORMAL				
2	P	B	YES	NORMAL	X	PARTIAL	1	1
		A	NO	NORMAL	Y	COMPLETE	2	2
		B	NO	NORMAL				

3	P	A	NO	NORMAL	Z	COMPLETE	3	3
		B	NO	NORMAL				

2 C.36.20.1.4 RT Radiation Set Usage

4 A typical example for different values of RT Radiation Set Usage (300A,0707) in the current RT
 6 Radiation Record Set SOP Instance versus in the SOP Instance referenced by the Referenced RT
 8 Radiation Set Sequence (300A,0702) is as follows: The treatment defined by the RT Radiation Set
 SOP Instance, in which RT Radiation Set Usage (300A,0707) has the value TREATMENT, may be
 sent to the treatment device and applied for quality assurance without a patient being present. In this
 case, RT Radiation Set Usage (300A,0707) in the current SOP Instance has the value PLAN_QA.

C.36.21 RT Dose Contribution Record Module

10 The RT Dose Contribution Record Module contains information about the delivered dose.

12 **Table C.36.21-1**
RT Dose Contribution Record Module Attributes

Attribute Name	Tag	Type	Attribute Description
Radiation Dose Identification Sequence	(300A,0618)	1	Identifies the dose values that are recorded by this RT Radiation Record Set IOD. One or more Items shall be included in this Sequence.
>Radiation Dose Identification Index	(300A,0603)	1	Index of this Item in this Sequence. The value shall start at 1 and increase monotonically by 1.
>Referenced Radiation Dose Identification Index	(300A,060C)	1C	Radiation Dose Identification Index value that links the Radiation Dose Identification defined by this Sequence Item to the corresponding Item in an RT Radiation Set Instance. Required if the Instance referenced in Referenced RT Radiation Set Sequence (300A,0702) contains a Radiation Dose Identification Sequence Item that corresponds to this Radiation Dose Identification Item.
>Radiation Dose Identification Label	(300A,0619)	1	User-defined label for the Radiation Dose Identification. See C.36.2.1.1.1.
>Conceptual Volume Sequence	(3010,0025)	1	Reference to a Conceptual Volume which received dose during treatment delivery. See C.36.21.1.1. Only a single Item shall be included in this Sequence.

<i>>>Include Table 10.34-1 "Conceptual Volume Segmentation Reference and Combination Macro Attributes"</i>			
Radiation Dose Sequence	(300A,0617)	1	Describes dose contributed by referenced RT Radiation Record SOP instances. For every SOP instance referenced in Referenced RT Radiation Record Sequence (300A,0703) exactly one item shall be present in this Sequence.
>Referenced RT Radiation Record Sequence	(300A,0703)	1	The RT Radiation Record SOP Instance that describes parameters for dose delivery of the recorded Radiotherapy treatment for the Fraction specified in RT Radiation Set Delivery Number (300A,0704). Only a single Item shall be included in this Sequence. See C.36.20.1.1.
<i>>>Include Table 10-11 "SOP Instance Reference Macro Attributes"</i>			
>Radiation Dose Values Parameters Sequence	(300A,061F)	1C	Dose values of this RT Radiation Record with respect to the dose identification items defined in the Radiation Dose Identification Sequence (300A,0618). Required if Measured Meterset to Dose Mapping Sequence (300A,0772) is not present. May be present otherwise. The number of Items included in this Sequence shall be the same as the number of Items in the Radiation Dose Identification Sequence (300A,0618).
>>Referenced Radiation Dose Identification Index	(300A,060C)	1	The value of Radiation Dose Identification Index (300A,0603) in the Radiation Dose Identification Sequence (300A,0618) identifying the dose contribution to which this Item in the Radiation Dose Values Parameters Sequence (300A,061F) applies.
>>Meterset to Dose Mapping Sequence	(300A,0620)	1	Mapping of Cumulative Meterset (300A,063C) to Radiation Dose Value (300A,0625). This may be as defined in the RT Radiation Set for the RT Radiation or calculated for this RT Radiation Record Set.

			See Section C.36.11.1.1. Two or more Items shall be included in this Sequence.
>>>Cumulative Meterset	(300A,063C)	1	Cumulative Meterset where a dose value is delivered. See Section C.36.11.1.1.
>>>Radiation Dose Value	(300A,0625)	1	Dose value (in Gy) delivered at the corresponding Cumulative Meterset (300A,063C). See Section C.36.11.1.5.
<i>>>>Include Table C.36.2.1.5-1 "Radiobiological Dose Effect Description Macro Attributes"</i>			
>Measured Meterset to Dose Mapping Sequence	(300A,0772)	1C	Measured dose values of this delivered radiation mapped to Meterset values. Required if Dose Mapping Sequence (300A,0620) is not present. May be present otherwise. One or more Items shall be included in this Sequence.
>>Referenced Expected In-Vivo Measurement Value Index	(300A,0773)	3	Expected In-Vivo Measurement Value Index (300A,0622) in the Expected In-Vivo Measurement Value Sequence (300A,0621) from the RT Radiation Set Instance that is being recorded.
>>Cumulative Meterset	(300A,063C)	1	Cumulative Meterset where a dose value is delivered.
>>Radiation Dose Value	(300A,0625)	1	Dose value in Gy delivered at the corresponding Cumulative Meterset (300A,063C) of the current SOP Instance.
>>Dose Measurement Device Code Sequence	(300A,0774)	2	Device used to measure the dose data. Zero or one Item shall be included in this Sequence.
<i>>>>Include Table 8.8-1 "Code Sequence Macro Attributes"</i>			<i>Defined CID 7026 "Radiotherapeutic Dose Measurement Devices"</i>
>>Measured Dose Description	(3008,9012)	3	User-defined description of Measured Dose (e.g. "Exit dose", "Point A").

2 C.36.21.1 RT Dose Contribution Record Module Attribute Descriptions

C.36.21.1.1 Conceptual Volume Sequence

- 4 The Conceptual Volume Sequence (3010,0025) identifies a Conceptual Volume defining a volume for which dose has been recorded during treatments.

2 If the Conceptual Volume is associated with a segment, the segment is defined by the Referenced
Segment Reference Index (3010,0020) in the Conceptual Volume Segmentation Reference and
Combination Macro (see section 10.34).

4 Alternatively, the Conceptual Volume might not be associated with a segment; for example, when
dose recording is specified using a nominal dose to a volume and the tracking coefficients are
6 approximated by Meterset values.

8 Typically, this Module references Conceptual Volumes which have been used in the RT Dose
Contribution Module of the RT Radiation Set SOP Instance referenced by the Referenced RT
Radiation Set Sequence (3147,7502).

10 **C.36.22 RT Radiation Record Common Module**

12 The RT Radiation Record Common Module contains treatment-modality-independent information
about a delivered RT Radiation. A delivered RT Radiation may be radiation to a patient or radiation
without a patient being present (e.g. for QA purposes).

14

**Table C.36.22-1
RT Radiation Record Common Module Attributes**

Attribute Name	Tag	Type	Attribute Description
<i>Include Table 10.9.2-1 "Extended Content Identification Macro"</i>			
<i>Include Table C.36.2.1.6-1 "RT Radiation Common Base Macro Attributes"</i>			
Treatment Session UID	(300A,0700)	1	Uniquely identifies the RT Treatment Session to which this instance belongs.
Referenced RT Instance Sequence	(300A,0631)	1C	The RT Radiation SOP Instance that provided the instruction to deliver the radiation. Required if an RT Radiation SOP Instance was used to provide the instructions to the delivery system. Only a single Item shall be included in this Sequence. See C.36.10.1.2.
<i>>Include Table 10-11 "SOP Instance Reference Macro Attributes"</i>			
RT Radiation Usage	(300A,0701)	1	A general indication of how the referenced RT Radiation was used. The Defined Terms are specified in C.36.10.1.1. This value may differ from the RT Radiation Set Intent (300A,0637) within the Instance referenced by the Referenced RT Radiation Set Sequence (300A,0702). See C.36.20.1.4.

<p>Treatment Record Content Origin</p>	<p>(300A,0709)</p>	<p>1</p>	<p>The origin of the content of this SOP Instance.</p> <p>Enumerated Values:</p> <p>DEVICE = The content has been recorded by the treatment device which performed the treatment delivery.</p> <p>USER = The content has been constructed based on user inputs.</p>
<p>Treatment Delivery Continuation Flag</p>	<p>(300A,0708)</p>	<p>1</p>	<p>Indicates whether this SOP Instance represents the record of a treatment delivery which was a continuation of a previously interrupted treatment delivery of the RT Treatment Fraction specified by the RT Radiation Set Delivery Number (300A,0704).</p> <p>Enumerated Values:</p> <p>YES: The record represents a continuation.</p> <p>NO: The record represents a treatment delivery that was started at the first RT Control Point.</p>
<p>RT Treatment Termination Status</p>	<p>(300A,0714)</p>	<p>1</p>	<p>Termination status of the recorded treatment.</p> <p>Enumerated Values:</p> <p>NORMAL</p> <p>The delivery of the fraction represented by the referenced RT Radiation IOD terminated as expected and the fraction has been correctly delivered.</p> <p>ABNORMAL</p> <p>The delivery of the fraction represented by the referenced RT Radiation IOD did not terminate as expected and the fraction has been incorrectly delivered.</p>
<p>RT Treatment Termination Reason Code Sequence</p>	<p>(300A,0715)</p>	<p>2C</p>	<p>Treatment machine termination code. This code is dependent upon the particular application and equipment.</p> <p>Required if RT Treatment Termination Status (300A,0714) is ABNORMAL.</p> <p>Zero or more items shall be included in this Sequence.</p>
<p>>Include Table 8.8-1 "Code Sequence Macro Attributes"</p>			<p>Defined CID 9561 "Treatment Termination Reasons"</p>

Machine-Specific Treatment Termination Code Sequence	(300A,0716)	3	Machine-specific termination codes. One or more Items are permitted in this Sequence.
>Include Table 8.8-1 "Code Sequence Macro Attributes"			No Baseline CID is defined.
Treatment Termination Description	(300A,0730)	2C	A user-readable description for an abnormal termination. Required if RT Treatment Termination Status (300A,0714) is ABNORMAL.
Treatment Tolerance Violation Sequence	(300A,0731)	2	Reports violations of tolerances that occurred during treatment delivery. Zero or more items shall be included in this Sequence.
>Treatment Tolerance Violation DateTime	(300A,0736)	1	Datetime when Treatment Tolerance Violation occurred.
>Treatment Tolerance Violation Category	(300A,0732)	1	The category of tolerance violation which was exceeded. Defined Terms: CLINICAL = Delivery went out of clinically allowed tolerance. MACHINE = Delivery went out of machine tolerance.
>Treatment Tolerance Violation Type Code Sequence	(300A,0761)	1	Type of treatment tolerance violation. One or more Items shall be included in this Sequence.
>>Include Table 8.8-1 "Code Sequence Macro Attributes"			If Treatment Tolerance Violation Category (300A,0732) has the value CLINICAL, Defined CID is 9566 "Clinical Tolerance Violation Types" If Treatment Tolerance Violation Category (300A,0732) has the value MACHINE, Defined CID is 9567 "Machine Tolerance Violation Types"
>Treatment Tolerance Violation Cause Code Sequence	(300A,0762)	1	Cause of treatment tolerance violation. One or more Items shall be included in this Sequence.
>>Include Table 8.8-1 "Code Sequence Macro Attributes"			Defined CID 9565 "Treatment Tolerance Violation Causes"

>Treatment Tolerance Violation Attribute Sequence	(300A,0733)	2C	The Attribute whose value exceeded the tolerance. Required if the violation corresponds to an Attribute in the current SOP Instance. Zero or one Item shall be included in this Sequence.
<i>>>Include Table 10-20a "Extended Selector Attribute Macro Attributes"</i>			
>Treatment Tolerance Violation Identification	(300A,0735)	1C	An identification of the parameter(s) which exceeded the tolerance, intended for structured processing. Required if Treatment Tolerance Violation Attribute Sequence (300A,0734) is not present or has zero Items. May be present otherwise.
>Treatment Tolerance Violation Description	(300A,0734)	1C	User-defined description of the treatment tolerance violation. This information is intended for display to human readers. Shall not be used for structured processing. Required if Treatment Tolerance Violation Attribute Sequence (300A,0734) is not present or has zero Items. May be present otherwise.
>Override Sequence	(3008,0060)	2	Overrides of this treatment tolerance violation, including the authorization by a qualified person to continue treatment delivery. Zero or one Items shall be included in this Sequence.
>>Operator Identification Sequence	(0008,1072)	1	Identification of the operator who authorized the override. One or more Items shall be present.
<i>>>>Include Table C.17-3b. "Identified Person or Device Macro Attributes"</i>			<i>The Observer Type (0040,A084) shall be PSN.</i>
>>Override DateTime	(300A,0760)	1	Date and Time when the user authorized the override.
>>Override Reason	(3008,0066)	2	User-defined reason of the override. May contain notes, e.g. on the justification why the treatment was delivered in the presence of an interlock or unexpected machine condition.

>>Alternate Value Sequence	(300A,073E)	2	The alternate value for the parameter as accepted by the user when the override was entered. The actual value applied during treatment may be different. Zero or one Item shall be included in this Sequence.
>>>Include Table 10-2 "Content Item Macro Attributes Description"			Baseline CID is CID 9570 "RT Overridden Treatment Parameters"
Confirmation Sequence	(300A,073F)	2	Records confirmations (sign-offs) by treatment session operators of details that may not be verified electronically (e.g. the presence of devices). Zero or more Items shall be included in this Sequence.
>Include Table 10-30-1 "Assertion Macro Attributes"			Baseline CID for Assertion Code Sequence (0044,0101) is CID 9564 "Treatment Session Confirmation Assertions".
Interlock Sequence	(300A,0740)	2	Interlocks which occurred prior, during or after the delivery of radiation covered by this SOP Instance. Zero or more Items shall be included in this Sequence.
>Interlock DateTime	(300A,0741)	1	Date and Time when the Interlock occurred. The date and time of occurrence may be when the interlock occurred (e.g. by a real-time system) or when the interlock was recorded. See C.7.4.2.1.4:
>Interlock Description	(300A,0742)	1	User-readable description of the interlock.
>Interlock Origin Description	(300A,0783)	1C	Description of the origin of the interlock. Required if Interlock Originating Device Sequence (300A,0743) is not present.
>Interlock Originating Device Sequence	(300A,0743)	1C	Contains the attributes that identify the device that originated the interlock. Only a single Item shall be included in this Sequence. Required if Interlock Origin Description (300A,0783) is not present.

>>Include Table 10.36-1 "Device Identification Macro Attributes"			No Baseline CID is defined.
>Interlock Code Sequence	(300A,0744)	1	Code(s) that describe the interlock(s) that occurred. One or more Items shall be included in this Sequence.
>>Include Table 8.8-1 "Code Sequence Macro Attributes"			Baseline CID is 9568 "Treatment Interlocks".
>Interlock Resolution Code Sequence	(300A,0745)	1	The action applied to resolve the interlock. One or more Items shall be included in this Sequence.
>>Include Table 8.8-1 "Code Sequence Macro Attributes"			Defined CID 9563 "Interlock Resolutions"
>Interlock Resolution User Sequence	(300A,0746)	1	The user that resolved the interlock. One or more Items shall be included in this Sequence.
>>Include Table 10-1 "Person Identification Macro Attributes"			
Additional Parameter Recording Instance Sequence	(300A,0780)	3	SOP Instances that contain additional recording of treatment parameters. One or more Items are permitted in this Sequence. See C.36.22.1.1.
>Include Table 10-11 "SOP Instance Reference Macro Attributes"			
>Creator-Version UID	(0008,9123)	1C	Unique identification of the equipment and version of the software that has created the referenced Instance that contains the additional parameters. The UID allows one to avoid attempting to interpret the additional parameters with an unknown format. Required if the Referenced SOP Class UID (0008,1150) is Raw Data Storage ("1.2.840.10008.5.1.4.1.1.66"). May be present otherwise. Note: this value corresponds to the Creator-Version UID of a referenced Raw Data SOP Instance.

2

C.36.22.1 RT Radiation Record Common Attribute Descriptions

4

C.36.22.1.1 Additional Parameter Recording Instance Sequence

6

The Additional Parameter Recording Instance Sequence (300A,0780) allows referencing of a SOP Instance which contains additional parameters recorded during the delivery. For example, the

2 recording may be high-frequency samples of certain parameters to allow in-depth analysis for quality assurance or other purposes.

C.36.23 RT Radiation Salvage Record Module

4 The RT Radiation Salvage Record Module contains information about the values which have been recorded when recording by the modality-specific RT Radiation Record IOD was not possible and
6 thus only a minimal subset of attributes is present.

8 **Table C.36.23-1
RT Radiation Salvage Record Module Attributes**

Attribute Name	Tag	Type	Attribute Description
Include Table C.36.2.2.7-1 "Radiation Generation Mode Macro Attributes".			
Starting Meterset Value Known Flag	(300A,0723)	1	Whether it is known that the value of the Cumulative Meterset at the first recorded RT Control Point represents the actual value at the start of the treatment delivery. NO: The Cumulative Meterset at the first recorded RT Control Point may have an estimated or arbitrary value. YES: The Cumulative Meterset at the first recorded RT Control Point has the actual value at which the treatment was started or resumed.
<i>Optionally, all other Attributes at Instance level which are part of the RT Radiation SOP Instance referenced in Referenced RT Instance Sequence (300A,0631), describing the delivery device. See C.36.23.1.1.</i>			
Number of RT Control Points	(300A,0604)	1	Number of RT Control Points in the RT Radiation Salvage Record Control Point Sequence (300A,0722). The value shall be equal to or greater than 2.
RT Radiation Salvage Record Control Point Sequence	(300A,0722)	1	Control Points used to record the beam delivery. The number of Items included in this Sequence shall equal the value of Number of RT Control Points (300A,0604).
>Include Table C.36.2.2.5-1 "RT Control Point General Macro Attributes"			
>Referenced Radiation Generation Mode Index	(300A,0605)	1C	The value of Radiation Generation Mode Index (300A,0601) in the Radiation Generation Mode Sequence (300A,067B) in this IOD that defines the Radiation Generation Mode used for this Control Point. Required if Number of Radiation Generation Modes (300A,0685) is

			present and the conditions in Section C.36.2.2.5.1.1 are satisfied.
<i>>Optionally, all other Attributes at RT Control Point level which are part of the RT Radiation SOP Instance referenced in Referenced RT Instance Sequence (300A,0631). See C.36.23.1.1.</i>			

2 C.36.23.1 RT Radiation Salvage Record Module Attribute Descriptions

C.36.23.1.1 Recorded Parameter

4 Additional optional attributes contain values which are known after the termination of the treatment
 6 delivery. Any subset of Attributes of the referenced RT Radiation SOP Instance may be provided. If
 8 present, an Attribute shall be enclosed in the nested Sequence as it appears in the referenced RT
 Radiation SOP Instance. If additional parameters are supported these are expected to be
 documented in an implementation’s Conformance Statement.

Example

10 The following example shows the recording of a Source Gantry Angle of 5 deg and the Y Jaw
 Openings of 2/3 mm at Control Point 7.

12

**Table C.36.23-1
 Additional Optional Parameter Example**

Attribute	Tag	Additional Optional Parameter	Value
...			
Starting Meterset Value Known Flag	(300A,0723)	No	YES
...			
RT Beam Limiting Device Definition Sequence	(300A,0641)	Yes	
>Device Index	(3010,0039)	Yes	2
>Beam Modifier Orientation Angle	(300A,0645)	Yes	90
>Device Type Code Sequence	(3010,002E)	Yes	(130330, DCM, “Jaw Pair”)
>Parallel RT Beam Delimiter Device Sequence	(300A,0648)	Yes	
>>Parallel RT Beam Delimiter Device Orientation Label Code Sequence	(300A,0644)	Yes	(130335, DCM, “Y Orientation”)
...			
RT Radiation Salvage Record Control Point Sequence	(300A,0722)	No	
>RT Control Point Index	(300A,0600)	No	7
...			
>Source Roll Angle	(300A,067A)	Yes	5
>RT Beam Limiting Device Opening Sequence	(300A,0656)	Yes	

>>Referenced Device Index	(300A,0607)	Yes	2
>>Parallel RT Beam Delimiter Positions	(300A,064A)	Yes	2/3

2

Part 4 Addendum

4 **Add the following to PS3.4, Appendix B.5, Table B.5-1**

SOP Class Name	SOP Class UID	IOD Spec (defined in PS 3.3)
<u>RT Radiation Record Set Storage</u>	<u>1.2.840.10008.5.1.4.1.1.481.16</u>	<u>RT Radiation Record Set IOD</u>
<u>RT Radiation Salvage Record Storage</u>	<u>1.2.840.10008.5.1.4.1.1.481.17</u>	<u>RT Radiation Salvage Record IOD</u>
<u>Tomotherapeutic Radiation Record Storage</u>	<u>1.2.840.10008.5.1.4.1.1.481.18</u>	<u>Tomotherapeutic Radiation Record IOD</u>
<u>C-Arm Photon-Electron Radiation Record Storage</u>	<u>1.2.840.10008.5.1.4.1.1.481.19</u>	<u>C-Arm Photon-Electron Radiation Record IOD</u>
<u>Robotic Radiation Record Storage</u>	<u>1.2.840.10008.5.1.4.1.1.481.20</u>	<u>Robotic Radiation Record IOD</u>

6

Part 6 Addendum

2 Add the following data elements to PS3.6:

4 **6 REGISTRY OF DICOM DATA ELEMENTS**

(300A,0700)	Treatment Session UID	TreatmentSessionUID	UI	1
(300A,0701)	RT Radiation Usage	RTRadiationUsage	CS	1

10 **Change the following code definitions to PS3.16, Annex D:**

ANNEX D DICOM CONTROLLED TERMINOLOGY DEFINITIONS (NORMATIVE)

Code Value	Code Meaning	Definition	Notes
...			
110518	Patient Movement	A movement of the patient preventing continuation of procedure or affecting testresult quality.	
110519	Operator Error	An error of the operator preventing continuation of procedure or affecting testresult quality.	
...			

12

Add the following new codes to PS3.16, Annex D:
--

2 **ANNEX D DICOM CONTROLLED TERMINOLOGY DEFINITIONS (NORMATIVE)**

Code Value	Code Meaning	Definition	Notes
130450	Operator decision to terminate treatment	Decision was made by the operator of the equipment to discontinue treatment.	
130451	Patient decision to terminate treatment	Decision was made by the patient to discontinue treatment.	
130452	Physician decision to terminate treatment	Decision was made by the physician to discontinue treatment.	
130453	Treatment Terminated	Treatment delivery of this RT Radiation was terminated.	
130454	Resolved by overriding Interlock	An out-of-tolerance delivery parameter was accepted or re-specified and treatment delivery was continued.	
130455	Resolved by repositioning Patient	The patient was re-positioned and treatment delivery was continued.	
130456	Bolus Present	A bolus is confirmed to be present.	
130457	Cone Present	A cone is confirmed to be present.	
130458	Block Present	A block is confirmed to be present.	
130459	Applicator Present	An applicator is confirmed to be present.	
130460	Headframe Present	A headframe is confirmed to be present.	
130461	Inappropriate Patient Orientation	The patient could not be positioned on the patient positioning device in a way, that the shape of treatment area has an unacceptable orientation to match the intended target area.	
130462	Inappropriate Patient Position	The patient could not be positioned on the patient positioning device in a way, that the that the shape of treatment area radiated the intended target area.	
130463	Machine Not Available	The machine intended to be used for treatment was not available.	
130464	Change in Patient Anatomy	The patient's anatomy is found to be inconsistent with the patient model used during planning to the extent that treatment delivery was impacted.	
130465	Machine Calibration Adjustment	A re-calibration of the treatment device impacted the treatment delivery.	
130466	Unavailability of a Beam Modifier	A planned Beam Modifier was not available at the time of treatment.	
130467	Machine Capability License Expired	A capability of the treatment device was not available because the corresponding license expired.	

Code Value	Code Meaning	Definition	Notes
130468	Beam Targeting Tolerance Violation	Beam targeting parameters have been adjusted in a way that violated a clinical tolerance.	
130469	Meterset Tolerance Violation	A Meterset value has been adjusted in a way that violated a clinical tolerance.	
130470	Delivery Rate Tolerance Violation	A Delivery Rate has been adjusted in a way that violated a clinical tolerance.	
130471	Jaw Position Tolerance Violation	Jaw positions exceeded the machine tolerance.	
130472	MLC Position Tolerance Violation	One or more MLC leave positions exceeded the machine tolerance.	
130473	Source Position Tolerance Violation	The Source Position angle exceeded the machine tolerance.	
130474	Dose Rate Tolerance Violation	The dose rate exceeded the machine tolerance.	
130475	Primary Fluence Monitoring System Interlock	An interlock triggered by failure of the primary system monitoring fluence.	
130476	Secondary Fluence Monitoring System Interlock	An interlock triggered by failure of the secondary system monitoring fluence.	
130477	Timer Interlock	An interlock triggered by a timer.	
130478	Door Interlock	An interlock triggered by a door being open.	
130479	Patient Motion Interlock	An interlock triggered by patient movement.
